1. Introduction to Nest Trader

NEST (Next Generation Electronic Securities Trading platform), developed by Thomson Reuters International Services Pvt. Ltd, is a complete trading solution for members across several exchange venues including NSE. The software has been developed to provide an integrated system for trading and risk management. This system has been deployed and is being used by some of the leading brokerage houses in India. Nest supports multiple exchanges and multiple segment trading.

Nest Trader is the front-end application that allows a trader to perform several trading functions that include:

- 1. Track scrips of user's choice by creating market watch groups.
- 2. View market picture data for scrips.
- 3. Place Buy/Sell orders to the exchange.
- 4. View orders, trades and positions data.
- 5. Set up effective risk management system.
- 6. Use add-on tools to receive alerts, send internal messages etc.

In this manner, several trading functions can be performed easily through the Nest Trader workstation. These features are explained in consecutive sections.

2. File

2.1 Login

After installing nest package on system, an icon named NEST Trader (also widely known as NT') will be placed on the desktop. User needs to just double-click on the icon to start the Nest Trader application. After application starts, it prompts the user for the login window. The user needs to enter the login name and password in the respective fields provided.

| T Trade | r - Login 0 OMNESYS NEST TRADER® |

| 📃 Qui | :k Login |
| Cor | firm Scrips Download |
| Clea | ar And Download All Scrips |
| | Login |

| User Name: | The User Name or Login Id of the user is to be entered. |
|--------------------------------|---|
| Password: | The corresponding password for the User Name must be entered. |
| Forgot Password: | This option can be used in case the user forgets password. |
| Change Password: | This option can be used to change the existing password to a new one. |
| Quick Login: | The user can tick the check-box for 'Quick Login' to speed up the login process. With 'Quick Login', existing orders and trades are not recounted, thus speeding up the login process. |
| Confirm Scrips Download: | The user can check this option to confirm whether the scrip files are to be downloaded or not. |
| Clear and Download All Scrips: | This option can be used by the user to delete old scrip master files and download them freshly. |
| Login: | The user has to simply click on the 'Login' button or press Enter on his keyboard, after entering relevant Login details on his terminal. |

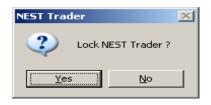

2.2 Logout

The user can logout from Nest Trader by clicking on 'Logout' under the File Menu or by using the shortcut key F10. Once the user attempts to close the application, a confirmation pop-up will appear asking whether the user wants to save market settings or not. If user selects "Yes", the entire settings will be saved, if user selects "No", it will not save the settings.

2.3 Lock Application

This option is used to secure the application from unauthentic use. Once the user locks the application, the application cannot be operated until the application is unlocked by the user by entering the correct valid password.

2.4 Refresh Broadcast

This option can be used to refresh the broadcast from the server. This option is used when broadcast is stopped or it is running delayed or in case of any disconnection from application server

2.5 Refresh Client

This option is used by dealer do retrieve all the clients which are mapped by Admin. Through Refresh Client option all client are visible in Nest Trader application in dealer terminal.

2.6 Get Log Messages

This option is used to get the all messages in the Log window. This option will also retrieve the previous messages from the server if the user has logged out and login again in application and those retrieved messages will also get displayed in the message bar of the users.

2.7 Change Password

The option allows user to change login password at any time as per user convenience. The password policy used is described below:

For encryption of passwords, we use 128-bit encryption key with a proprietary logic, also have an option of storing it with 128-bit encryption key and AES Encryption method.

- The system requests an ID & password for logging in.
- The password is encrypted before transmission.
- The password is stored in an encrypted format in the database.
- Change of password is mandatory for the first time user.
- Change password cannot be the same as of the last 3 passwords.
- User cannot login after THREE consecutive wrong passwords & the user can only login after resetting the password. Resetting of password is done by the administrator.

• The password should be of minimum 6 characters & maximum 12 characters in length

• It must be Alpha numeric.

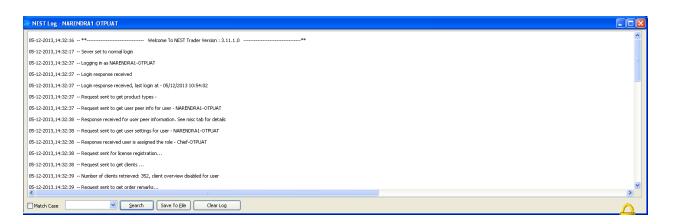

• The password will be checked against log-in ID. The login id & password cannot be the same.

- Space is not a valid character in the password
- Password expires automatically after 14 trading days forcing the user to choose a new password.
- Password can be changed by the users at any time as per user's will.
- Special character is allowed in password.

Market Watch is one of the most commonly accessed features in any trading application. The users can create multiple profiles of portfolio in which scrips are added as per convenience. User will be able to view market touchline data of scrip along with the other useful information which will be required for trading in the market. User has option to rearrange the column through Reposition Column option available on doing right click on market watch profile header. User has an option to Add or Remove the unwanted columns to keep in market watch window. User should click on Save button to save the settings permanently.

User can also sort the scrips in ascending or descending order by just clicking on the top of the column for the parameter by which user wants to sort. The user can also have multiple market watch and can tile them or place them according to choice. The Market Watch window can also be made free-floating or can be encompassed within the main frame of the application. If it is made free-floating then the user can also place this on a

separate screen (dual display).In the market-watch window, the user can access several functions by right-clicking on the market-watch One can view the relevant information pertaining to the scrip by setting up the columns in the desired sequence. This can be done from the list of available columns. The user can remove the unwanted fields (Columns) or push them back in the market watch. One can call few important features from the market watch by just a right click. Few features that can be called from market watch are: Order Entry Window, Market Depth Window, Order Book, Trade Book, Net Position Window, Scrip comparison, Scrip properties, Heat map, Ticker, Expression builder, Intra-day charts, Market picture charts, Gridlines, Write to excel, setting up of the font style in the market watch, insert space in market watch, etc. This can be done by pressing relevant short-cuts assigned to those functions. Right click options are explained below.

• **Buy Order Entry (F1):** The user can invoke the Buy Order Entry window by selecting a scrip on the market-watch, right-clicking on it and selecting this option. The scrip details such as Symbol Name, Instrument Name, Exchange Segment would get automatically picked up from the market-watch itself for the selected scrip. (Further description on Buy Order Entry is provided in **Orders and Trades** section).

• Sell Order Entry (F2): The user can invoke the Sell Order Entry window by selecting a scrip on the market-watch, right-clicking on it and selecting this option. The scrip details such as Symbol Name, Instrument Name, Exchange Segment would get automatically picked up from the market-watch itself for the selected scrip. (Further description on Sell Order Entry is provided in Orders and Trades section).

• Order Book (F3): The user can invoke the Order Book window by right-clicking on the market-watch and selecting this option as well. This is particularly convenient, if the user wishes to view all orders for particular scrip. The user can select the desired scrip in the market-watch, right-click on it and select 'Order Book F3' to view all orders filtered for that particular scrip. (Further description on Order Book is provided in Orders and Trades section).

• **Trade Book (F8):** The user can invoke the Trade Book window by right-clicking on the market-watch and selecting this option as well. This is particularly convenient, if the user wishes to view all trades for particular scrip. The user can select the desired scrip in the market-watch, right-click on it and then select 'Trade Book F8' to view all trades filtered for that particular scrip. (Further description on Trade Book is provided **in Orders and Trades** section).

• Actions: This option is found while right-clicking on the market-watch and provides the user with options to perform certain actions on the market-watch. These include:

| Insert Blank Line | Insert |
|-----------------------------|--------|
| Load Default MarketWatch | Ctrl+N |
| Set as Default MarketWatch | Ctrl+M |
| Move Outside | Alt+F3 |
| Move All the Groups Outside | |

- Insert Blank Line: This option can be used to insert a blank line between two scrips in the market-watch. This is sometimes useful for the user to view scrips within the market-watch. User can press **Insert** Key to insert a blank line between two scrips present in the market-watch.
- ▲ <u>Load Default Market Watch</u>: This option can is used to load the default marketwatch which was saved earlier. User can also press **Ctrl+N** to invoke this feature.
- Set as Default Market Watch: This option can be used to set a particular marketwatch as the default one. The user simply needs to right-click on the market-watch that he/ she wishes to set as default, and then select this option to set it as the default market-watch to appear whenever user logs in to Nest trader workstation. User can also press Ctrl+M to invoke this feature
- Move Outside: This option is used if the user wants to view a particular marketwatch in a separate window altogether that is not within the workstation. The group on which the user right-clicks and selects this option will get moved outside to a new window. The user simply needs to right-click on the market-watch to be moved outside to a new window.
- Move Inside: After the user has placed the market watch outside if the user wants to move the market watch inside then user has to click on Actions, and then select on Move Inside option, or just close the new window to view the market-watch only on the workstation and not in a separate window. User can invoke this feature by pressing Alt+F3.
- Move All the Groups Outside: This option is similar to the 'Move Outside' option, except that by selecting this option, all market-watch groups can be moved outside into separate windows for each market-watch group. The user can individually bring back a market-watch group by right-clicking on that group window and selecting 'Move Inside'. If the user wishes to move all groups back inside the workstation, users can simply right-click on any of the groups moved outside, and select the option 'Move All the Groups Inside'.
- Act on Call: This feature has been provided for trading on technical calls.
- **Tools:** This option is found while right-clicking on the market-watch and provides the user with short-cuts to access certain useful tools from the market-watch. These tools include:

| Scrip Properties | Shift+F7 |
|-----------------------|--------------|
| Options Calculator | Shift+O |
| Implied Volatality | F5 |
| Derivatives Chain | Ctrl+D |
| Add Ticker Scrips | Shift+K |
| Compare Scrips | Shift+Q |
| Put Call Parity | |
| Option Chain | Ctrl+Alt+D |
| Combined Market Depth | Ctrl+Alt+F6 |
| Snap Quote | F6 |
| Combined Vwap | |
| Vwap Statistics | Ctrl+Shift+H |
| News | Shift+N |
| | |

- Scrip Properties: The user can view the scrip data for given scrip, by selecting the scrip on the market-watch and right-clicking on it and then selecting Tools and Scrip Properties option. The Scrip Properties window appears providing concise applicable information scrip. (Further description is provided in the Scrip Properties point in the **Market** section). User can also invoke scrip properties by pressing **Shift+F7**.
- <u>Option Calculator</u>: This option allows the user to calculate Volatility and Greek values i.e. Delta, Gamma, Theta, Vega, Rho along with the IVs for the option contract.
- Implied Volatility [F5]: This option has been provided to view Implied Volatility for Options Instruments only.
- Derivatives Chain: Derivatives Chain can be used to view details of all contracts for a given symbol (for example, INFY) across all expiries. User can invoke this screen by pressing Ctrl + D.
- Add Ticker Scrips: This option can be used to Add Ticker scrips, that is, to add the scrips that should appear in the Ticker when there is a change in last trade price. (Further description is provided in the point on Ticker in the Market section). User can also invoke this screen by pressing Ctrl+K.
- ▲ <u>Compare Scrips:</u> This option can be used to make comparisons between two scrips present in the market watch. The user can enter conditions based on which comparisons needs to be done between any two scrips. (Further description is provided in the point on Scrips Comparison in the Market section). User can invoke this screen by pressing Shift+Q.
- ▲ <u>Put-Call Parity</u>: This option has been provided to view the put-call parity for Options contract only.
- ▲ <u>Option chain</u>: This option allows the user to get the details of all strike prices of a particular scrip and particular expiry. It displays the information such as LTR IV ch,

LTR IV fut, Net Change, Volume, Ask Quantity, Ask Price, Bid Quantity, Bid Price, LTP and Open Interest (OI).

- <u>Combined Market Depth:</u> This option allows the user to view the best available market depth for BSE and NSE. User can view that scrip is available at in which exchange with best rate for buy and sell.
- Snap Quote: This option allows the user to see market touch line of a particular scrip/contract. User can invoke this window by pressing F6. (Further description is provided in the Snap Quote point in the Market section)
- <u>Combined VWAP</u>: This option has been given to view the combined VWAP of Cash segment scrips across all Cash Exchange-Segments.
- ▲ <u>VWAP Statistics:</u> This option allows the user to view Open Rate, High Rate, Low Rate, Close Rate, Vwap value of the particular period selected for a scrip/scrip.
- ▲ <u>News:</u> This option allows the user to view all the news received for scrip.
- <u>Dialog Bars</u>: The Dialog Bars option allows the user to view the following Bars in the workstation:

| \checkmark | Show Scrips Dlg Bar | Ctrl+S |
|--------------|-----------------------------------|-------------|
| | Show Index Value Bar | Ctrl+I |
| \checkmark | Show Ticker Bar | Ctrl+K |
| | Show Scrips Comparison Bar | Ctrl+J |
| | Show Implied Volatality Graph Bar | Shift+F5 |
| | Show News Bar | Shift+Alt+N |
| | Show HeatMap | Ctrl+F |

- Show Scrips Dlg Bar: On clicking on this option, the scrips dialog bar appears on the workstation, from where the user can easily add scrips to market-watch rather than adding them through the Market-watch Group Settings window. This window can also be invoked by pressing **Ctrl+S**.
- Show Index Value Bar: On clicking on this option, the Index Value Bar appears on the workstation, from where the user can add and view the value of any selected benchmark index. This window can also be invoked by pressing Ctrl+I.
- Show Ticker Bar: The user can view the Ticker Bar, by selecting this option. The Ticker bar provides current market price of scrips selected by the user in a ticker. (Further description provided in the point on Ticker in the Market section). This window can also be invoked by pressing Ctrl+K.
- Show Scrips Comparison Bar: The user can view the output of the Compare Scrips feature in the Scrips Comparison Bar. (Further information is provided in the point on Scrips Comparison in the Market section). This window can also be invoked by pressing Ctrl+J.
- Show Implied Volatility Graph Bar : This option allows the user to view the implied volatility graph for the particular range of strike price select for the option contract

which is selected by a user. The volatility graph can be plotted on the basis of Last Traded price or Bid or Ask of Cash segment or Future contract. This window can be invoked by pressing **Shift+F5**.

- Show News Bar: This option allows users to see all the news which are received for all the scrips. This window can be invoked by pressing Shift+Alt+N.
- Show Heat Map: On clicking on this option, the user has a convenient way of tracking the performance of various scrips. (Further description is provided in the point on Heat Map in the Market Section). This window can be invoked by pressing Ctrl+F.
- **Option Greeks:** This option has been provided for Options Greeks. The user needs to add the option contract in the Greek MW setting window by entering the volatility %, Interest rate, No. of Days. Also can select the values needs to updated as per Cash or Future LTP or Bid or Ask for the option scrip selected. After entering the details user needs to click on Add button after which user will be able to see the Greeks values in market watch i.e. in Cal Delta, Cal Gamma, Cal Theta, Cal Vega.
- Add Normal Basket: This option allows the user to add the stock in the Normal Basket window. Normal basket is explained in the Normal market watch section further.
- Set Security Alert: The user can use this option to set alerts for stock or index. When the user selects scrip on market-watch, right-clicks on it, and then selects Set Security Alert, the Set Alerts window appears with the scrip information where user has to enter the relevant parameter for getting alert. Once the alert is set it will get appear in the Alert list window. The user can then easily enter the other information to set an alert. (Further description is provided in the **Tools** section).
- Intraday Chart: The user can view an intraday chart for given scrip in the marketwatch, by selecting that scrip, right-clicking -> plug-in commands -> Nest Intraday Chart. The Intraday Chart would get plotted for the selected scrip. (Further information is provided in the point on Intraday Charts in the Market section).
- Historical Chart: The user can view the historical chart for given scrip in the market-watch, by selecting that scrip, right-clicking ->-> plug-in commands -> Nest Historical Chart. The Historical Chart would then get plotted for the selected scrip. (Further information is provided in the point on Historical Charts in the Market section).

- **Tile Windows Horizontally:** This option can be used to tile all the windows in the workstation horizontally. (Further description is provided in the **Windows** section).
- **Tile Windows Vertically:** This option can be used to tile all the windows in the workstation vertically. (Further description is provided in the **Windows** section).
- **Gridlines:** This option can be used to view gridlines drawn on the market-watch for the data appearing in it.
- Write to Excel: This option can be used to write the data present in the marketwatch into an excel sheet. It will simply copy the data to an excel file that would get generated on selecting this option at a given point in time, which may be used for record purposes.
- Link to Excel: This option can be used to link the data on the market-watch to an excel sheet, where the data in the excel sheet will keep getting updated or refreshed, as the broadcast keeps getting refreshed in the market-watch. The user has the following options to link market-watch data to an excel file:

- Selected Items: This option will paste only that data to the excel sheet which was selected in the market-watch.
- Selected Items With Headers: This option will paste only that data to the excel sheet, which was selected in the market-watch, but with the relevant headers as well.
- ▲ <u>All Items</u>: This option will paste all items in the market-watch including the relevant headers to the excel sheet.

Once the user selects any of the above mentioned options, he/she needs to paste the data to an excel sheet to view refreshable data on the excel sheet.

- **Copy to Clipboard:** This option can be used to copy data from the market-watch to the clipboard and make it available to paste it elsewhere.
- **Customize:** This option can be used by the user to invoke the Preference Settings window from the market-watch. The user can set his preferences for market-watch such as font, color, and default values from this window. (Further description is provided in the **Preferences** section.

- **Refresh Market-watch Scrips:** This option has been provided to Refresh Marketwatch scrips, in case broadcast needs to be refreshed.
- Add My Holdings: This option has been provided to add holdings of the user in the cash market segment, in the market-watch.

The following information is provided in the Market-watch window for any Marketwatch group.

3.3. Load PreDefined Market watch

This option will load the pre-defined market watch in Nest trader.

3.4 Auction Market Watch

This option allows the user to see the scrip's which are getting traded in Auction market. Users will get the scrip's in the market watch and can trade in allowed scrip's which are available in Auction market. User can place the orders through order entry window.

3.5 Snap Quote

The user can press **F6** from the market watch to call the Snap quote window for the scrip which is highlighted in the market watch. This window gives the complete snap shot of the way the scrip is performing in the market on that day as well as on that given point of time. The information like the Open, high, low, previous day close gives an indication how the scrip fared on that particular day and the top 5 bid/ask gives the indication about what kind of liquidity that scrip has in the market and at what price levels. Based on this information and a larger display, which shows all the information. The user can choose which one does he wants to view by default. User will be able to view quantity, buy average traded price, sell average traded price, value, Gain/Loss, MTM of particular scrip traded. These details are displayed for particular scrip across all clients to a dealer. B-ATP represents Buy Average price and S-ATP represents Sell Average trade price.

3.6 Expression Builder:

Expression Builder gives the user the flexibility to add user-defined columns in the market-watch. The user can select the existing columns and the basic arithmetic operators as shown in the below figure and build a new column. This new column will appear in the market-watch and the respective calculations will be done on real-time basis and these calculations will be reflected accordingly. The user-defined column will appear in the list of columns in the market watch and that can reused as a column to build any other new expression.

| Add User Defined Col | lumns - ONLI 🔳 🗖 🗙 |
|---|--------------------------------|
| Column Name | |
| Lot Qty LTQ Volume Traded Today Bid Qty Ask Qty Open Interest Total Open Interest Strike Price LTP Open High Low Bid Rate | + - * / () End Clear |
| Column Expression | |
| | Add Cancel |

3.7. Scrip Comparison:

This feature is very useful in comparing two different fields for two different or same scrips in different expiry. The scrips can belong to any segment from any Exchange. Even Arithmetic or Logical Operators can be used to create any expression of user's choice. For example, the user can track the spread between two expiries of a symbol.

3.8. Scrip Properties:

The user can call this window by pressing **Shift+F7** from the market watch. It provides the basic information pertaining to the selected scrip. The information includes: Tick Size, Board Lot Quantity, Price Unit, etc. The user can also configure the entire list of information by clicking on the configure button. Below are the details that appear in the Scrip Properties Window:

| 🐎 Scrip Properties - ASHISH | | | |
|-----------------------------|---------------------|--|--|
| NSE-EQ-LT | | | |
| NSE | Configure | | |
| Property | Value | | |
| Company Name | LARSEN & TOUBRO LTD | | |
| Market Type | Normal | | |
| Unique Key | LT | | |
| Board Lot Qty | 1 = | | |
| Tick Size | 0.05 Rs | | |
| Security Name | NSE-EQ-LT | | |
| Cusip Code | NA | | |
| Reuter Code | LART.NS | | |
| Sedol Code | B0166K8 | | |
| ISIN Code | INE018A01030 | | |
| Bloomberg Code | LT | | |
| Issue Start Date | 23Jun2004 | | |
| Issue Maturity Date | NA | | |
| Issue Rate | 0.00 | | |
| Issued Capital | 61.53860 Crs | | |
| Listing Date | NA | | |
| Permited To Trade | 0 | | |
| Local Update Time | 28Mar2013 | | |
| NoDelStartDate | NA | | |
| NoDelEndDate | NA | | |
| BookClsStartTime | 17Aug2012 | | |
| BookClsEndTime | 24Aug2012 | | |
| Record Date | NA | | |

| < | ► lai | | |

3.9 Ticker:

| Add Scrips for Ticker |
|---|
| Select Scrip |
| Exchg-Seg Series Symbol |
| NFO V OPTSTK V RELIANCE V |
| Expiry Date Opt Type Strike Price |
| 27Jun2013 V CE V 880.00 V Add |
| |
| RELIANCE-EQ NIFTY13APRFUT RELIANCE13APRFUT INFY13MAYFUT INFY13APR2950PE RELIANCE13JUN880CE |
| Use Ctrl+Shift+K to Add/Delete from MarketWatch |
| OK Cancel |

The user can add the scrips that should appear in the ticker window of the trading terminal. Once added, whenever there is a trade in the scrips that appear on the selected list that was included in the ticker, one can see the details moving on the top of the terminal on the ticker window displaying the Trade Price and the Trade Quantity.

3.10. Charts:

If the user wants to open the Charts then they can right-click on the scrip in marketwatch and select Intra Day Chart option or press **Shift+ P** option. This will update on real-time basis during market hours. There are various types of charts available for the user. For example: Line chart, Candle chart and Bar chart.

Intraday Charts:

Intraday chart feature can show the chart data of particular scrip depending on the duration selected by the client or based on every tick. User just needs to right click on the scrip present in the market watch and select on Intraday Chart.

Historical Charts:

Historical Chart feature plots the charts based on selected scrip's past data for selected duration. User just needs to right click on the scrip present in the market watch and select the Historical Chart option. Client can select the period of 3 months, 6 months, 1 year or even customize the duration based on his choice.

3.11 Price Ladder

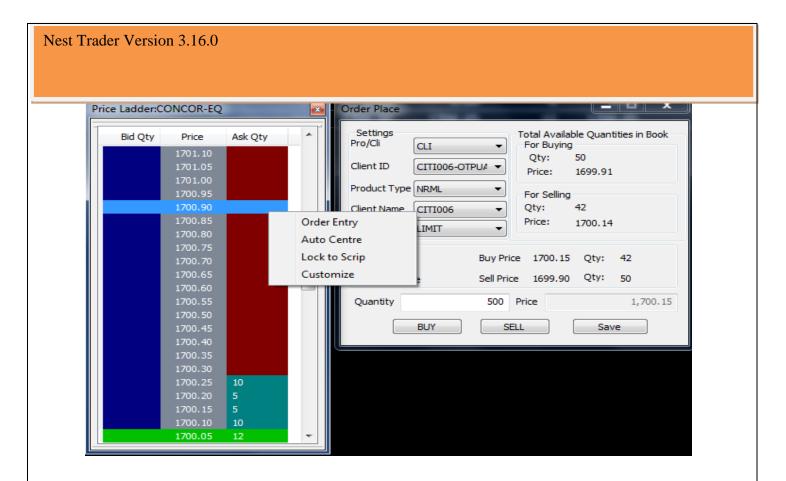

In Price Ladder it display the best 5 Bid and Ask vertically which is same as the Snap Quote, both window shows the market depth. User can place the order by right click on it and select Order Entry option. With Price Ladder option user can buy or sell the quantity based on the Average Price or based on price client can buy/sell quantities. When user invoke the Price Ladder, a window (Price Ladder Order Entry) will open along with it, In price Ladder Order Entry, user can selects two options to place order, these are:

1. VWAP: If user will select VWAP, user will be given two options in that

a. Get VWAP: Get VWAP option will allow user to get the best price available against the quantity, in this case user can enter desired quantity and the price will get set automatically. It will also show approximate VWAP for order.

b. Get quantity: Get Quantity option will offer user the best quantity against price. User will have to fill price and it will return the quantity available for that price.

3.12 Combined Market depth

This option will show the top 10 bid and ask along with price.

| Qty | Price () | | Tr. Price | Disc Qty | Prod Type | ١ | Validity | Client Id | | Client Name | Pa | rticipant code | Validity | No Of Day | s |
| 1 | | 811 | (|) (| 0 NRML | • | DAY 👻 | CITI1-OTPUAT | Ŧ | Aries | - | | ▼ 27-03-2013 | - 0 | Submit |

Sell Order Entry: Once clicked on this option following window will appear which uses to sell the selected scrip. The short cut key F2 (or can be invoked by "-"key) assigned to it. User has to fill all required fields before click on submit button.

| Sell Ord | ler Entry - AS | HISH | _ | - | - | _ | - | _ | | _ | X |
|----------|----------------|---------|-----------|----------|-----------|----------|---------------|-------------|----------------------|----------|------------|
| Exhg-Seg | OrderType | Pro/Cli | Inst Name | Symbol | | Туре | Strike | Expiry | Basket - Wave - Line | Auc No | Remarks |
| NSE 👻 | LIMIT 🚽 | CLI 🗸 | EQ . | INFY | | • | · • | | NONE 🔻 | | - |
| Qty | Price () | | Tr. Price | Disc Qty | Prod Type | Validity | Client Id | Client Name | Participant code | Validity | No Of Days |
| 1 | 1 | 2907 | 0 | | 0 NRML | ▼ DAY ▼ | CITI004-OTPUA | - CITI004 | • | | - 0 Submit |

The user must enter the following details while placing a Buy or Sell order:

| | The user must select the exchange-Segment for which the order is |
|-------------|--|
| Exhg-Seg: | to be placed. |
| | The user must select the order type as Limit, Market, StopLoss- |
| Order Type: | Limit, or StopLoss-Market, for placing the order. |

| Pro/Cli: | This field will be set to Cli by default for an investor Client |
|-------------------|--|
| | The user must select the Instrument Name for which the order is to |
| Inst name: | be placed. |
| mot nume. | The user must select the desired Symbol for which the order is to |
| Symbol: | be placed. |
| Туре: | The user must select the Option Type. |
| | The user must select the Strike Price for which the order is to be |
| Strike Price: | placed. |
| Expiry Date: | The user must select the Expiry Date. |
| | The user must enter the quantity of the scrip for which the order is |
| Quantity: | to be placed. |
| Quantity. | The user must enter the limit price at which the order is to be |
| Price (): | placed for the scrip. |
| | The user must enter the Trigger Price at which the order is to get |
| Tr.Price: | triggered, in case of Stop Loss orders. |
| | The user must enter the disclosed quantity that should appear be |
| Disc Quantity: | disclosed in the market depth. |
| | The user must select the product type while placing the order i.e. |
| | NRML, MIS, CNC, ARB, PMS. This classification is for internal |
| Prod Type: | purposes and is significant from a risk-management perspective. |
| | The user must select the Validity of the Order as 'Day' or 'IOC'. In |
| | case of a 'Day' order, as the name suggests, the order is valid for |
| | that day, that is, till that trading session is open. 'IOC' orders stand |
| | for Immediate or Cancel, meaning, the order will either get |
| Validity: | executed, and if not, it will get cancelled. |
| Client Id: | This field will contain the client id for which order is to be placed |
| | This field will contain the client name of the client id which is |
| Client Name: | selected or alternatively client can select client name also. |
| | The Participant Code, corresponding to the Client ID selected |
| Participant Code: | appears in this field. |
| | The user must enter the Validity Date in case of Good Till Date |
| Validity date: | orders, and is as such not applicable to NSE. |
| | The user must enter the Number of Days of validity of the order, in |
| No of Days: | case of Good Till Days order, and is as such not applicable to NSE. |

4.2 Basket Orders

If the user wants to place bulk orders in one go, one can use the basket order feature available in NEST Trader. Using this feature the user can either prepare a file in txt or csv format with the orders and directly upload into the system and place it or add multiple scrips of his/her choice and place the orders in one go. If user wants to slice the wave (breaking the whole order into bunch of orders with different quantity) user needs to

click on **"Slice"** button. Baskets are there in Nest trader bulk trading. Following types of baskets are available here.

Normal basket/Basket nap

If the user wants to place bulk orders at one go, user can make use of the basket order feature available in NEST Trader. Using this feature, a user can either prepare a file in ".txt" or ".csv" format with the orders, or directly upload into the system. This will ensure that system places all the orders at one go. The user can save the file through **Export List** button provided and load the file through **Browse** button provided.

<u>Normal Basket</u>: The user can create a normal basket by adding individual orders into a basket and placing them at one go. Any combination of Order Type, Product Type, Scrip Information, Client Id, Quantity, and Price can be entered to create a basket.

In the Normal Basket Order Entry Window, the user must enter the following details:

| Exchg-Seg: | The user must select the desired Exchange-Segment NSE for which he/she wishes to place the order. |
|---------------|---|
| Ord Type: | The user must select the appropriate Order Type as Limit or Market or Stop Loss-Limit or StopLoss-Market for placing the order for the scrip selected. |
| Р Туре: | The user must select the Product Type for placing the order for the scrip selected i.e. NRML, MIS, CNC, ARB, and PMS. This classification is used for internal purposes, and is significant from a risk-management perspective. |
| B/S: | The user must select transaction type whether the scrip selected must be bought or sold, by selecting Buy or Sell, respectively. |
| Pro/ Cli: | The user must select 'Pro' if the order is to be placed for the proprietary account or 'Cli if the order is to be placed for Client Account. |
| Validity: | The user must select the validity of the order for the scrip selected as DAY, IOC or EOS |
| Inst Name: | The user must select the Instrument Name for the scrip which he / she wish to add in the basket. |
| Symbol: | The user must select the symbol for the scrip which he / she wish to add in the basket. |
| О Туре: | The user must select the option type. |
| Strike Price: | The user must select the Strike Price. |

| Expiry Date: | The user must select the relevant expiry date. |
|-------------------|--|
| Quantity: | The user must enter the quantity that should be placed in the order. |
| Price: | The user must enter the price at which the order is to be placed for the scrip in the basket. |
| Mkt Prot (%): | The user can enter the market protection %, which is useful in case the user makes a typing error while entering the price for a scrip. The price entered should be within the range of market LTP +/- x% of LTP, or else, the order for that scrip only, will not get placed. |
| Trig Price: | The user must enter the Trigger Price while placing Stop Loss orders, as the price at which the order is to get triggered. |
| Disc Quantity: | The user can enter the disclosed quantity, that is, the quantity that is to be disclosed to the market. |
| Client ID: | The user must select the Client ID for which the order is to be placed for the scrip selected in the basket, in case 'Pro/ Cli' is selected as 'Cli'. |
| Client Name: | The Client Name corresponding to the Client ID selected appears in this field. The user can also select the Client Name alternatively, and the corresponding Client ID will appear in the 'Client ID' field. |
| Participant Code: | The participant code corresponding to the Client ID selected will appear in this field. |
| Validity Date: | The Validity Date of the order can be entered in this field in case of Good Till Date Orders, and is as such not applicable to NSE. |
| No. Of Days: | The No. of Days of Validity of the order can be entered in this field in case of Good Till Days orders, and is as such not applicable to NSE. |
| Remarks: | The user can enter any remarks while placing the order. In case of basket orders, the user may enter 'Basket Order' in the Remarks field for each of the scrips added in the basket to distinguish the orders as basket orders for user reference. The user may also name every basket placed with unique names mentioned in the 'Remarks' field to identify orders belonging to a particular basket. |

▲ Once the user has entered all the relevant details as mentioned above, the user can click on **'Add'** to add the scrip to the basket.

▲ Once the user has added all the order details in the basket, he/she can place the basket at one go, by just clicking on **'Place'**.

In case the user wishes to save the basket to a file, one can do so by clicking on **'Export'**. A dialog will appear prompting the user to save the file as .csv type by entering the file name and selecting the file location where the file needs to be saved.

In case the user wants to re-enter the details for an order to be added to the basket, he/she may do so, by clicking on '**Reset**'. This will clear existing data and allow the user to enter fresh data.

The user may also load orders from a file created. The file must be of .csv or .txt type and created in the appropriate format. This is the same as the format in which the file gets saved during **'Export'**. The user simply needs to click on **'Browse'**, then select the file from the file path and click on **'Open'**. The orders in the file will get automatically loaded to the basket.

Apply LTP

Through this option user can apply LTP rate to the script added in the basket and can place the same in the desired exchange. User can also invoke this option by pressing Alt + Y.

Apply Market

Through this option user can apply Market rate to the script added in the basket and can place the same in the desired exchange. User can also invoke this option by pressing Alt + M.

Apply Counter

Through this option user can apply counter rate of the opposite side to the script added in the basket and can place the same in the desired exchange. User can also invoke this option by pressing Alt + C.

Apply Same

Through this option user can apply same rate of the same side to the script added in the basket and can place the same in the desired exchange. User can also invoke this option by pressing Alt + G.

Apply LTP with 0%

Through this option user can place the market order by defining market protection based on last trade price. When user select this option then system will add that much percentage above the Last trade price and derive the price for the scrip added in the basket and can place the same in the desired exchange. User can also invoke this option by pressing Ctrl + Alt + Y.

Apply Counter with 0%

Through this option user can place the market order by defining market protection based on counter rate of the opposite side. When user select this option for a buy order then system will take the ask rate and add the particular percentage and derives the price for the scrip added in the basket and can place the same in the desired exchange. For sell order system will take the bid price and add the percentage and derive the price for the scrip. User can also invoke this option by pressing Ctrl + Alt + C.

Apply Same with 0%

Through this option user can place the market order by defining market protection based on the same rate of the same side. When user select this option for a buy order then system will take the bid rate and add the particular percentage and derives the price for the scrip added in the basket and can place the same in the desired exchange. For sell order system will take the ask price and add the percentage and derive the price for the scrip. User can also invoke this option by pressing Ctrl + Alt + G.

Balanced Basket

Once user clicks on Balanced Basket, it will ask the name of the basket. After entering the name, the Balanced Basket window will appear on user screen. User needs to enter the value (Quantity wise / Values / Value in Lacs) for which basket is to be placed. If the balanced basket is for buy, the dialog will be blue in color i.e. index will be get bought and the constituent will be for sell, and if basket is for sell then dialog will be Red in color i.e.

index will be get sell and the constituent for Buy. Basket can be reversed through the option provided "Reverse" in the dialog itself. This basket can be saved in a particular location using "Create" tab. The user also has option to transfer the weight ages from particular scrip to other scrip.

| Based on Value | User needs to specify the Basket Value in terms of Quantity, Value or Value in Lacs |
|------------------|---|
| Index Value | This field displays the current index value while placing the basket order |
| Symbol | User needs to select the Index for which basket is to be placed and based on which the Constituents will appear in the window |
| Expiry Date | User needs to select the Expiry date of index for which basket needs to be placed |
| Order Type | User needs to select the Order type for placing the basket |
| Pro / Cli | User need to select Pro or Cli in which Basket order is to be placed |
| Buy / Sell | User needs to select the transaction type of the basket which needs to placed |
| Disc Qty(%) | User can define disclosed quantity percentage by which the quantity will be displayed in market depth window when the order is placed to exchange. |
| Prod Type | User needs to specify the product type while placing the basket order |
| Price Type | User needs to specify price type while placing the basket order. If user select Ask in Price type then all the orders will be placed on Ask price of the stock prevailing in the market |
| Validity | User needs to specify the validity i.e. Day while placing the Basket Order |
| Client ID | User needs to select the Client id for which Basket order needs to be placed |
| Client Name | The Client Name corresponding to the Client ID selected appears in this field. The user can also select the Client Name alternatively, and the corresponding Client ID will appear in the 'Client ID' field. |
| Participant code | The participant code corresponding to the Client ID selected will appear in this field. |
| Get Constituents | This will display all the constituents for the index selected for placing the basket |
| Create | This option is used to save the basket |
| Reverse | This option is to place the reverse basket which was place earlier. For e.g. If Buy Basket was place for Index then while click reverse button it will do reverse transaction Sell Basket for Index. |
| Place | User needs to click on place button for submitting order in |

| | exchange |
|--------------------|--|
| Save Template | User can save the basket while click on Save Template button |
| Load Template | User can load the basket which was saved earlier |
| Transfer Weights – | User can select the scrip from which the weight ages needs to be |
| From | transfer to other scrip |
| Transfer Weights – | User needs to select the scrip to which the weight ages needs to |
| То | be given from other scrip |
| Transfer Weights | After selecting From and To scrip to transfer weight ages user |
| | needs to click on Transfer Weights button |
| Segment | It displays the Segment of the scrip which will be placed in the |
| | market |
| Instrument Name | It displays the Instrument name of the scrip which will be placed |
| | in the market |

4.3 Customize Basket

Add/Delete/Edit customized Basket

This option allows user to create user own baskets based on user preferences and needs of portfolio. User has to add scrips in the basket after giving it a name and the total weight age for the individual scrip. The total weight age cannot be more than 100. For adding the scrip in the market user needs to select Exchange name, Instrument Name, Symbol, Order type, Weight age etc.

| Model Name | User needs to mention the customize name of the basket |
|---------------|--|
| Description | User needs to mention the description of the customized basket |
| | which is to be created |
| Refresh | After creating a Customized basket user needs to click on Refresh |
| | button so that it will be appeared in list |
| Save Basket | After specifying the scrips and weight ages user needs to click on |
| | Save Basket to create it |
| Delete Basket | User can delete the customize basket by clicking on Delete Basket |
| | button |
| Save to File | User can save the basket into file by clicking on Save to File |
| | button |
| Load File | User can load the customize basket by clicking on Load File |
| | button |
| Exchange | User must select Exchange for the scrip which needs to be |
| | included in the basket |
| Inst Name | User must select the instrument name for the scrip which needs |
| | to be included in the basket |

| Symbol | User must select the symbol for which the order is to be placed. |
|-------------|--|
| Buy/Sell | User needs to select the Transaction type i.e. Buy or Sell |
| Weight ages | User needs to define the weight ages for the scrip |
| Order Type | User needs to enter the order type for the scrip |

Customized Basket Order Entry

The saved customized basket can be invoked here and get the constituent and place from the customized basket order entry. User needs to select the Model name and value and then click on Place button once the constituents appear in the Customized Basket Order Entry window.

| Model Name | User needs to select the Model name |
|--------------------|---|
| Value | User needs to specify the value for the basket to be placed |
| Price Type | User needs to select the Price type i.e. LTP, Bid, Ask, Mid at which |
| ,, | the basket will be placed |
| Order Type | User needs to select the Order type i.e. Limit or Market |
| Pro / CLi | User needs to select the Cli for placing basket in CLIENT and Pro if |
| | user wants to place the order in PRO account |
| Prod Type | User needs to select the Product type while placing the basket |
| Validity | User needs to select the type of Validity while placing the basket |
| Client id | User needs to select the Client id while placing the customize |
| | basket |
| Client Name | The Client Name corresponding to the Client ID selected appears in |
| | this field. The user can also select the Client Name alternatively, |
| | and the corresponding Client ID will appear in the 'Client ID' field. |
| Participant Code | The participant code corresponding to the Client ID selected will |
| | appear in this field. |
| Write to Excel | It allows saving the entity manager records in Excel as csv format. |
| Draw Grid Lines | It allows to enable to disable grid line in entity manager |
| Customize | It allows to change the Font name and Font size for entity manager |
| Copy to clip board | It allows to copy the records and save it in clip board |
| Exch.Seg | It displays Exchange or Segment for which basket will be placed |
| Instrument Name | It displays the instrument name of the scrip |
| Current Weight age | This will display the current weight age after assign some of the |
| | weight age to other scrips. |
| Weight age | This will display the actually weight age assign to the scrip while |
| | creating a Basket |
| Client id | This will display the Client id in which the basket will be placed |
| Order Type | This will display the Order Type for the scrips as per which the |
| | order will be placed in the market |
| Price | This will display the price at which the order will be placed |

| Quantity | This will display the quantity which will get derived for the scrips and will be placed in the market. |
|----------------|---|
| Buy / Sell | This will display the transaction type of the scrips |
| Product Type | This will display the product type |
| Pro / Cli | This will display the PRO or CLI in which order will be placed |
| Trading Symbol | This will the trading symbol of the scrip to be placed in the market |

4.5 After Market Orders

After Market Orders allow the user to place orders after market close as well. These orders will get stored in the order book and will be sent to the exchange once the market opens for trading by Admin user. The user can place either buy or sell after market orders for which he must enter the following details

Buy Order Entry:

Through this option allows the user to place the Buy after market order for the NSE scrip's. The details are same as per the Order Entry screen. Once the user places the After market order then it will get displayed in the Order Book with the status "After market order request received". Admin can place the order next day when the market starts by selecting Place AM Order to exchange from the surveillance menu.

Sell Order Entry:

Through this option allows the user to place the Sell after market order for the NSE scrip's. The details are same as per the Order Entry screen. Once the user places the After market order then it will get displayed in the Order Book with the status "After market order request received". Admin can place the order next day when the market starts by selecting Place AM Order to exchange from the surveillance menu.

Basket Order – After Market Order

If the user wants to place bulk orders for After Market order at one go, user can make use of the basket order feature available in NEST Trader. Using this feature, a user can either prepare a file in ".txt" or ".csv" format with the orders, or directly upload into the system. This will ensure that system places all the orders at one go. The user can save the file through **Export List** button provided and load the file through **Browse** button provided. Once the user places the After-market basket order then it will get displayed in the Order Book with the status "After market order request received". Admin can place the order next day when the market starts by selecting Place AM Order to exchange from

the surveillance menu. Features remain the same which was explained for the Normal Basket Feature

Basket Order – After Market Order for Spread order

This option is used to place the After Market orders for spread order contracts. If user want to place the bulk orders for spread order or user wants to place the order for same contract for multiple clients or different contract for same client or different contract for different clients at one go then user can use this option. User need to define the Exchange segment, select instrument name, select symbol, expiry date, validity, client type, client id, total quantity, price, etc. After entering and selecting required parameters user needs to press enter to add in the order in the basket. Once all the order is entered in basket then user needs to click on Place button provided. This will place all the orders in the market at one go. User also has open to save the file by clicking on Export Button. User can edit the file as per requirement and import the same through browse button provided.

4.7 Cover Order entry

Cover Order offers an order placement feature through which you can take a intra-day position in the equity/derivative/currency segment and at the same time, system place's a cover order for this position specifying the Stop Loss Trigger Price and the limit price. Cover order first leg can be a market order or a limit order. This cover order will help you to limit the loss, if any, on the position

Features

- Stocks for which Cover Order is enabled needs to be defined.
- All Orders Placed by the user for the product "CO" (cover order) should be a market order/limit Order
- System would place an SL order at price specified while entering order.
- Some pre-defined trigger price % configured for individual scrip's.
- Trigger price entered by the user for stop loss should be within this % from last rate.
- RMS would validate this product type taking lesser margin (RMS would take flat percentage or cash co factor times the "pre-defined trigger price % configured for individual scrip's").
- if one leg of the order get rejected , other leg would be cancelled by system
- Cancellation of order would cancel the original order placed by User as well as SL order placed by System.
- User can book loss/profit by converting SL order to market.
- Cover Orders are accepted for selected scrip's as configured by the administrator.
- Cover Order modification is allowed
- Cover Orders cannot be cancelled, the user needs to click on EXIT button to exit from the cover order.
- ٠

4.8 Spread Order Entry

Nest Trader Version 3.16.0

Through this option user needs to place the Spread Orders, following three types of orders are available in it.

- Spread Order: Only one order either Buy or sell can be placed in this option.
- 2L: This option is use to place 2L order
- 3L: Option can be used to place 3L orders.
- 1) Spread Order: Only one order either Buy or sell can be placed in this option.
- 2) 2L: This option is use to place 2L order
- 3) 3L: Option can be used to place 3L orders

The multi leg order entry window allows the user to place spread orders between two scrips in NSE.

In the spread order entry window, the user must enter the following details:

| B/S: | In case of a spread order type, the user can select whether given contract has to be bought or sold. If the first leg is required to be buy, then second leg will be automatically sell by default. |
|------------|---|
| Inst Name: | The user must select the instrument name for the scrip. |
| Symbol: | The user must select the symbol for which the order is to be placed. |
| Ор Туре: | The user must select the option type of the option contract. |

| Strike Price: | The user must enter the Strike Price of the option contract. |
|-----------------|---|
| Expiry Date: | The user must enter the Expiry Date for the contract in which user wants to trade. |
| Total Quantity: | The total order quantity for which the user wants to place the order must be entered in this field. |
| Price: | The user must enter the price at which user wants to place the order. In case the user selects the Order Type as:- <u>Spread Day:</u> The spread difference between the two contracts selected must be entered. <u>2L and 3L:</u> The individual prices of the contracts selected must be entered. |
| Market Lot: | The market lot size for the selected scrip is shown in this field. |
| Exch-Seg: | The exchange-segment for which orders are to be placed must be selected here. The appropriate scrip details of instrument name, symbol, option type, strike price, expiry date appear in the drop- down for these, depending on the exchange-segment selected. |
| Order Type: | The user must select the desired Order Type for placing the order. The user can select the following Order Types: Spread Day: This type must be selected to place spread orders between two contract of same symbol, but different expiries. It is commonly used to rollover existing positions, that is, to square-off position in one expiry and create fresh/ equivalent position in another expiry. The user simply needs to enter the information for the first scrip, and select only the expiry date for the second. As mentioned earlier, the spread or difference in price between the two contract selected must be entered in the 'Price' field. 2L: This type must be selected to place 2-Leg orders for two contracts. Both the legs of the order are sent together as one order in case of 2L orders. The user can select any combination of Inst Type, Symbol, Option Type, Strike Price and Expiry Date to place 3-Leg orders for three contracts. All three legs of the order are sent together as one order in case of 3L orders. The user can select any combination of Inst Type, Symbol, Option Type, Strike Price and Expiry Date to place 3-Leg orders for three contracts. All three legs of the order are sent together as one order in case of 3L orders. The user can select any combination of Inst Type, Symbol, Option Type, Strike Price and Expiry Date to place 3-Leg orders for three contracts. All three legs of the order are sent together as one order in case of 3L orders. The user can select any combination of Inst Type, Symbol, Option Type, Strike Price and Expiry Date to place 3L orders. In this case, the 'Total Quantity' and 'Price' entered are applicable to individual legs of the order in case of 3L orders. The user can select any combination of Inst Type, Symbol, Option Type, Strike Price and Expiry Date to place 3L orders. In this case, the 'Total Quantity' and 'Price' entered are applicable to |

| | individual legs of the order. |
|-------------------|---|
| Prod Type: | The user must select the product type that is enabled for him, while placing the order. The product type field is used for internal classification as MIS, which is for intraday positions, or NRML, ARB, PMS which is for carry-forward positions. This is significant from a risk-management perspective. |
| Validity: | The user must select the appropriate validity as 'Day' or 'IOC'. In case of NSE, the validity for 'Spread Order Type is Day', and for '2L and 3L Order Types, it is IOC'. |
| Pro/ Cli: | This field will be set to Cli by default for an investor. |
| Client ID: | This field will contain the client id of that investor client. |
| Client Name: | This field will contain the client name of that investor client. |
| Participant Code: | The participant code, if any, will appear in this field, corresponding to the Client ID selected. |
| B-W-L ID: | This field shows the Basket ID for the order, in case of institutional baskets. |

Once the user has entered the appropriate information, he can place the order by clicking on **'Submit'**. If the user wishes to re-enter the information, he can do so by clicking on **'Reset'**. This will clear the data that he had previously entered and allow him to enter fresh data.

4.13 Order Query

The Order query window tells user about how many orders are placed for a particular account or by a particular dealer. It will return all the placed orders (open orders as well as completed orders). The information provided in this window is same as that given in the Order Book window.

4.14 Trade Query

The Trade Query is the query about how many trades got executed for a given account or by a particular dealer. It will return all the trades for a particular account or trades done by a particular dealer or for a client. User needs to select the Entity Type, Entity ID and then click on Query button.

4.18 Trade / Partial Position Conversion

This option allows the user to get the log for partial position conversion done if any for the client.

The following information is displayed in the Trade / Partial Position Conversation window

| Display the Exchange segment of the scrip |
|---|
| Display the User Id of the scrip |
| Display the Account Id of the order |
| Display the Time |
| Display the Trading Symbol |
| Display the Transaction Type |
| Display the Pos Conv Qty |
| Display the Net Buy / Sell Value |
| Display the Old Product |
| Display the New Product |
| Display the Status |
| Display the Rejection Reason |
| Display the Rejected By |
| Display the Report Type |
| |

4.19 Order Slicing

Immediate Order Slice Dialog

This option can be used to slice an order for a given price immediately (within no interval; which means it places all the orders at once after slicing), which can be seen in Order Book (if they are open/completed) and Trade Book (If traded).

4.20 Simultaneous Orders

User can place two orders simultaneously by using this option. The dialog will appear

once you click on it ,you will be able to place two orders in any exchange and for any scrip

at a single go. (ctrl+Alt+S)

5 View Order and Trade Reports

5.1 Order Book

Once an order is placed, the user would like to see the status of that order. In order to do this, a user can call the order book window by pressing **F3** in the market watch. This will show the status of all the orders that were placed for the selected scrip. If the user presses F3 twice it would show the status of all the orders that were placed across all the segments as well as across the entire exchanges. The Order Book window is very userfriendly as it allows the user to view and access the data in a very efficient way. User can also set the columns in the sequence user prefers them to appear in the order book window. One can also remove the unwanted columns from the window. All the fields/columns can also be filtered by pressing 'Ctrl+F'. Pressing this short-cut will invoke a filter on the top of the order book. This allows the user to search for the information that user is looking for. For example, if the user wants to view all the Buy orders, user needs to invoke the filter and just type 'B' under the column Buy/Sell. The Order Book provides details of all the orders placed by the user. These include orders placed to the exchange, but not traded or partially traded (open orders), traded orders (completed), rejected orders and cancelled orders. The user can also modify or cancel an Open Order from this window, by selecting the order from order book and clicking on Modify or Cancel, as the case may be. Other functions like filtering orders, viewing the Order History (which is discussed in further sections), can also be performed easily by the user.

The following information can be viewed in the Order Book window:

| User Id | Displays the User Id from which the order is placed. |
|--------------|---|
| Exhg-Seg | Displays the Exchange-Segment for which order is |
| | placed. |
| Product Type | Displays the Product Type in which the order is placed. |
| Account Id | Displays the Account Id in which order is placed. |

| Participant Code | Displays the Participant Code of the client id if any |
|----------------------|--|
| | assigned to client. |
| Rejection Reason | Displays the order rejection if system / exchange has |
| | rejected the order. |
| Status | Displays the status of order i.e. open, trigger pending, |
| | cancelled or rejected. |
| Buy/Sell | Displays whether user has been placed order for Buy or |
| | Sell transaction type. |
| Trading Symbol | Displays the Trading symbol for which order is placed. |
| Total Quantity | Displays the Total Quantity entered while placing the |
| | order. |
| Price | Displays the price at which order is placed at the |
| | Exchange. |
| Nest Order No | Displays the Internal Nest Order Number. |
| Nest Update Time | Displays the Internal Nest Order Time. |
| Exchange Order No | Displays the Exchange order Number received from |
| | Exchange. |
| Order Source | Displays from where the order is placed by the user. |
| | This is the internal field and for NSE it will always be |
| | TWS. |
| Request Id | Displays the number of times the order is being |
| | modified by the user. |
| Exchange Update Time | Displays the time updated by exchange. |
| Exchange Entry Time | Displays the Order received Time by the Exchange. |
| Quantity Units | Displays the number of quantity in each Lot. |
| Account Name | Displays the Account Name for whom the order is |
| | placed. |
| Order Placed By | Displays from where order is placed. |
| Depository | Displays the Depository Name. |
| Quantity In Lots | Displays the Quantity in Number of Lots. |
| Exchange Account Id | Displays the Unique Exchange Account Id of Every Client |
| Modified By User | Displays the User Id who has modified the Order. |
| Exchange Time Stamp | Displays the Date and Time of which the Exchange |
| | returns after accepting order. |
| Auction Number | Displays the Auction Number of Auction Order. |
| Branch Id | Displays the Branch Id of Client. |
| Broker Id | Displays the Broker Id. |
| Traded Quantity | Displays the Traded Quantity which has been executed |
| | in the market. |
| Remarks | Displays the Remarks Mentioned by the User while |
| | placing the Order. |
| Trigger Price | Displays the Price on which the order should get |
| | Triggered in Stop Loss Order. |
| Order Type | Displays Order type for which order is placed (e.g. Limit, |

| | Market, Stop-loss or Stop Loss - Market). |
|--------------------|---|
| Good Till Date | Not applicable. |
| Validity | Not applicable. |
| Pro/Cli | Displays whether the order is for Client Or Proprietary |
| | account. |
| Disclosed Quantity | Displays the Disclosed Quantity to Exchange. |
| Pending Quantity | Displays the pending quantity which is to be executed. |
| Average Price | Displays the Average Price of the Order Placed. |
| Option Type | Displays the Option Type for the option contract. |
| Expiry Date | Displays the Expiry date for the future and option |
| | contract |
| Strike Price | Displays the Strike Price of the options contracts |
| Instrument Name | Displays Instrument Name or Series of the Symbol |
| Symbol | Displays the Symbol for the order is placed |

The user can view all orders (if filtered by invoking orders for a scrip from marketwatch), by ticking on the check-box 'Display All Orders'.

- The user can filter orders for any of the columns available, by clicking on 'Show Filters'. The user can then enter the value or range of values for any of the columns for which he wants the data to be filtered.
- The user can apply further filters by clicking on the 'Filter Orders' option. The user may filter orders for a Time Duration, Disable Orders from Other Users.
- The user can modify an open order, by selecting it and clicking on 'Modify'. Once the user enters the relevant information in the Modify Order Entry window and submits it, the modification request will get sent.
- > The user can cancel an open order, by selecting it and clicking on 'Cancel'.
- The user can also cancel all open orders (either filtered or unfiltered) by clicking on 'Cancel All'. All the open orders visible will then get cancelled. If filtered, then only those orders that are filtered will get cancelled.

5.2 Trade Book

The Trade Book window displays the executed orders for all the scrips. This window can be invoked by just pressing the **F8** key from the market watch. It will display the trade details as shown in the below figure. It also displays the summary of the trades done for that scrip at the bottom-end of the window. The summary displays the **Total Buy Quantity, Total Buy Value, Total Sell Value, Sell Quantity and the Net Amount.** Pressing F8 twice will display all the trades across all the scrips (All Segments All Exchanges).This is window from where a user can send a Trade Modification request to the exchange. The user must select the trade, click on **Modify** and enter the new client id to which the trade is to be modified. User has a facility to modify a single trade (Single Trade Modification) or user can also perform multiple trade modification.

Like Order Book, one can also filter information from the Trade book by invoking short-cut key '**Ctrl +F'**.

The following information is displayed in the Trade Book window:

| Exhg-Seg | Displays the Exchange-Segment for which order is placed. |
|----------------------|--|
| User Id | Displays the User Id who has placed the order. |
| Account Id | Displays the Account Id for which order is placed. |
| Participant Code | Displays the Participant Code of the client. |
| Buy/Sell | Displays whether the trade is as Buy or Sell. |
| Trading Symbol | Displays the Trading symbol for which order is placed. |
| Exchange Order No | Displays the Exchange order Number of the Trade. |
| Trade Price | Displays the Trade Price for the scrip/contract. |
| Trade Quantity | Displays the Quantity Traded for the scrip/contract. |
| Order Source | Displays the source of the order placed as TWS, Web etc. |
| Exchange Account Id | Displays the Unique Exchange Account Id of Every Client. |
| Quantity Units | Displays the Quantity in Each Lot. |
| Modified By User | Displays the User Id who modified the Trade. |
| Account Name | Displays the Account Name for whom the Trade is placed. |
| Order Placed By | Displays from where the order is placed. |
| Quantity In Lots | Displays the Quantity in Each Lot. |
| Modification Remarks | Display the remarks if there is error while modifying trade |
| | from old account id to new account id. |
| Quantity to Fill | Display the quantity which is yet to be traded when there is |
| | a partial trade. |
| Branch Id | Displays the Branch Id of Client. |
| Broker Id | Displays the Broker Id. |
| Option Type | Display the Option Type for the option contract. |
| Product Type | Display the product type for Example NRML, MIS (Margin |
| | |

| | Intraday Square-off), PMS, ARB, CNC |
|---------------------|--|
| Order Type | Display the Order type (e.g. Limit, Market, Stop loss) |
| Remarks | Displays the Remarks Mentioned by the User while placing |
| | the Order. |
| Pro/Cli | Display the Trade is for Client Or Proprietary. |
| Trade ID | Displays the Trade Id for each Trade. |
| Trade Time | Display the Trade Time. |
| Trade Date | Display the Trade Date. |
| Trade Status | Displays status of the trade i.e. Trade Confirmed |
| Expiry Date | Display the Expiry date for the derivative contracts. |
| Strike Price | Display the Strike Price for the option contracts. |
| Instrument Name | Display Series of the Symbol. |
| Symbol | Displays the Symbol. |
| Request Id | Display the number of Trader being modified by the user. |
| Nest Order No | Displays the Internal Order Number in nest order number. |
| Display | To Display the Trade in Trade Book |
| Position Conversion | To Modify the Product type for Individual Client |
| Modify | To modify the Trade from one Client to another |

5.3 Net Positions

This window can be invoked using shortcut key **'Alt+F6'** keys. The user can view the consolidated positions in the Net Positions Window. These positions can be further bifurcated according to the exchange/segment or according to the scrips for which the trade was made. This window also provides some vital information like the **Net Position, Buy Quantity, Sell Quantity, Buy Amount, Sell Amount, MTM profit/loss, etc. for all the individual scrips.** If the user desires to square-off all his pending positions or a part of the open positions then he can do that by just selecting the scrip(s) and then entering the percentage of quantity that he wants the system to be squared-off. User can also quickly square off the positions based on the order side. Based on the order side when user invoke Buy or Sell order entry window, the system will by default load all the relevant details like quantity, price, and the client code etc. which will be pre-populated so that user can confirm the details and square off the position quickly.

NOTE:

1. The Net Positions are updated automatically on real-time basis.

2. Net Buy quantity, Buy Value Sell Value Sell Quantity, NET Amount, and NET MtoM values are displayed on the status bar of the same window.

5.4 Spread Order Report

The Spread Order Report shows all spread orders placed. The user can perform similar functions as mentioned in the Order Book section, relating to modifying, cancelling, filtering orders etc in spread order report too

5.5 Order History

It returns the order history for the particular Nest Order Number. Once this option is selected, following window will appear wherein one needs to provide Nest Order Number for which user wants to get history for.

5.6 Bulk Trades

Through this option user will come to know about the quantity he is going to place is how much percentage of the Issue Capital or how much quantity it will be for a given percentage of the issue capital. This may help him while placing the bulk order.

5.7 Modified Trades

All trades which have been modified will reflect in this dialog, so if user wants to check whether the trade has modified or not then user can check from here.

The following information is displayed in the Modified Trades window

| Exhg Seg | Display the Exhg Segment of the scrip |

5.8 View RMS Limits

RMS View Menu is used for viewing the RMS limits of the:

- Broker
- Branch
- · Dealer
- · Client/Group
- · Client
- View Limits

5.9 View Holdings/Collateral Values

This option allows the user to view the holdings. Once selected a window will appear where user can select the account id to check holdings and collateral Values of clients. It gives the details of the holding such as total quantity, Used quantity etc.

5.10 View T1 Holdings

User has option to view the T1 Holding quantity for a client. T1 quantity means the quantity which client has not got that stock in DP but still it is in pool account of Broker or it can Buy Today and Sell Tomorrow quantity.

5.11 View Report

The Report Generator function is useful for taking back-up of order and trade reports.

The user can generate Order Reports and Trade Reports, for all or individual dealers (if admin), all or individual clients, all PRO Orders and save the file in the desired location.

The user also has the option to filter orders by any of the columns in the 'View Report' window and then generate reports for the filtered orders only.

A The following fields are available for generating reports:

| Report Type: | The user must select the report type as 'Order' or 'Trade' depending for which the report is to be generated. |
|------------------|--|
| Exhg-Seg: | The user must select the exchange-Segment for which the order or trade report is to be generated. |
| Formats: | The format, corresponding to the 'Report Type' and 'Exhg-Seg' selected, will appear. The format denotes how the report is to be generated, and is as per exchange specifications. |
| Dealer: | The user can select the Dealer Id (in case of admin) for whose orders or trades, the reports are to be generated. In case the report is to be generated for all orders or trades, the user can select the option 'All'. |
| Pro/ Cli: | The user can define whether the report is to be generated for all Pro orders or trades or all Client orders or trades, or for 'All'. |
| Client ID: | The user can define whether the report is to be generated for all orders or trades, pertaining only to the Client ID entered. |
| Client Name: | The Client Name, corresponding to the Client ID selected will appear. |
| From: | The user needs to enter the 'From' Date to define the date starting from which the report is to be generated. |
| То: | The user needs enter the 'To' Date to define the date ending with which the report is to be generated. |
| File Path: | The user can specify the File Name and File Path in which the report is to be generated. |
| ••• | The user can click on the option '' to browse through folders and select the file location in which the report is to be generated. |
| Generate Report: | By clicking on 'Generate Report', the report of orders or trades, as specified by the user will get generated and saved in the file location specified. |
| Load Ftry Sett.: | In case any changes are made to the file format of the report to be generated, the user can revert to the default factory settings, which contains the exchange specified format, by clicking on 'Load Ftry Settings'. |
| Display in List: | By ticking on the check-box provided for this option, the order or trade details that get generated in the report, appear in the Report View Generator window as well. If unticked, this information is not displayed in the window, but the report will still get generated. |

▲ Once the user selects the details for generating the report, he must click on **'Generate Report'** for the report to get generated. The details of the report generated

appear in the **View Report** window as well, from where the user may filter these orders or trades.

6 Preferences Menu

6.1 Shortcut Manager

Shortcut Manager keys allow the user to invoke almost all the windows using a single key or a combination of keys on the keyboard, rather than using the mouse every time, thus making it more user-friendly. Using the Short cut manager window, the user can not only view the hot-keys assigned to a window, but can also modify/customize the hot key for any window. If a modified key is already assigned to another window, the short-cut keys for these windows will get swapped.

| | Apply Cancel | |

Every user has own way of trading, which means the features of any trading terminal will vary from person to person. To address this, NEST gives the user the flexibility to customize many events/features available in the terminal.

The preference options are categorized as:

I) Appearance: This option allows the user to allow the user to specify the colour that should appear in the background/foreground for various reports.

a) <u>Apply to All Lists</u>: By ticking on this option, the appearance settings selected will get applied to all the windows

b) <u>Property For</u>: Under this drop-down, the user can define whether the appearance settings are to be applied to (a) Background; or (b) Foreground; by selecting the appropriate option from the drop-down.

c) <u>Font:</u> The font option allows the user to set the font name and font size in which windows how the data should appear.

d) <u>*Color:*</u> The color option allows the user to set the color for Background or Foreground in the screen.

e) <u>*Restore Columns Profile:*</u> Using this option, the user can restore the column profile to the default factory settings.

f) <u>Restore Appearance</u>: Using this option, the user can restore the appearance to the default factory settings.

g) <u>Index Trend – Based on Tick:</u> The trend color changes would appear in the marketwatch considering the trend for every tick, keeping the previous tick as base reference.

h) <u>Index Trend – Based on Closing Price</u>: The trend color changes would appear in the market-watch considering the trend for every tick, keeping the previous close price as base reference

II) Basket Manager

a) Under Default values user can set the Default exchange, Product, Order Type for creating NON-FIX Baskets

b) User can set the Focus to Qty or price for creating NON-FIX Baskets

c) User can set the default client id or Prefix or Retain last selected client for creating NON-FIX Baskets

d) Pick Both Exchange form Market watch specifies that when the user call for create basket window from market watch this default exchange to be BOTH

e) Combined order Entry – Even if it's a single exchange order from IO monitor Buy and SELL order entry window will be of both exchange.

f) Auto Accept Self Orders – No Popup window for acceptance will appear if the Order instruction has been created by the user himself.

g) Prompt on Reassign – This will give the user to a prompt on reassign to user of server level algos again to IO monitor.

h) Short Basket id – This will show small basket id in Basket Manager.

III) Basket Order :

The Basket Order preferences are related to the basket events like reading the basket and reject if any error there in basket. The user can set the error message representation by Writing into log / Popup Message / Flash Message / Write into a different Error Log file. If the user needs confirmation messages before placing orders, he can check the 'Confirm before Placing Orders' option. He can give the Default Basket Name, select default basket type as Normal / Balanced / Directional and Set Default Index basket Type as Cash / Future. User can also set Basket Alerts based on quantity and value. User can get the constituents based on Full value or Value in Lacs or Quantity

IV) Event: This option allows the user to customize few events like order confirmation, rejection, SL order getting triggered, order getting executed, etc. The user can set a beep for these events and can also subscribe or unsubscribe for the messages.

- <u>a)</u> <u>Event:</u> The user can select the event for which preferences are set from the dropdown. The events available are: (a) Buy Order; (b) Sell Order; (c) Buy Trade; (d) Sell Trade; (e) Exercise; (f) Spread LongRoll; (g) Spread Short Roll.
- b) <u>Beep Sound</u>: The user can define whether beep sounds for event alerts must be through internal speakers or external speakers.
- <u>(Event) Messages</u>: User will be able to view in message bar all Buy Order Messages, if Event is selected as Buy Order; and also user can view Sell Order Messages, if Event is selected as Sell Order Messages and so on. Under this header, the options available represent the event for which preferences are to be set in terms of how the relevant message must appear. These include: (a) Acknowledgment; (b) Confirmation; (c) Frozen; (d) Cancellation; (e) Rejection; (f) Completed.

- <u>d)</u> <u>Beep:</u> If the Beep option is ticked on for any (Event) Message a beep sound is generated for that event.
- <u>e)</u> <u>Log Window</u>: If the Log Window is ticked on for any (Event) Message, whenever the message comes, the Log Window is updated with that relevant message for that event.
- <u>f)</u> <u>Pop-Up Message</u>: If the Pop-Up message is ticked on for any (Event) Message, whenever the message is to be given, a Pop-Up Message would appear for that event.
- <u>*g*</u>) <u>*Color:*</u> The user can define the font color for each (Event) Message appearing in the Log Window.

<u>h) Enable Formatted Log Message</u>: The user can tick this option and use the format editor to customize the format in which the Log Messages should appear. If un-ticked, the default factory settings are used to display messages.

i) <u>Session Expiry Time in Minutes:</u> The user can enter the time (in minutes) of inactivity after which the workstation should get locked automatically.

j) <u>Restore Defaults</u>: By clicking on this option, the user can restore the default settings

V) General: Features like the format of time that should appear etc. can be selected from this option.

g) Use Trend coloring for symbol will display trend color in symbol field.

VII)Order

| Preference Settings | - ASHISH-OTPUAT | | | × |
|--|---|--|--|---|
| Category: | | | | |
| Category: Appearance Basket Manager Basket Order Event Bernet Market Watch Order RMS | Order Exchange Specific Settings Exchg Seg Order Qty Pick the Derivative Market Lot Pick from Market Watch Set No. Of Market Lots Alerts Qty Alert (In Market Lot) Price Alert (% of LTP) Set Value Alert (Qty * Price) Trigger Price Alert (% of LTP) ClientId Oefault Client Id Exchg Seg ALL | Default Value PCode Pro/Cli Product Type Order Type 0 0.00 0.00 | S Default CLI NRML LIMIT Crder Prompts Fresh Modification Cancellation | |
| | Retain Last Selected Client Miscellaneous Pick Order Instruction Line from Market Single Click To Place Order Close Order Entry Dialog After Placing 1 Set Default Disclosed Qty (% of Order Check for Order Qty During Modificatio Order Alert for Groups Scrip Code Prefix Lace | Watch Order Qty) n of Order | Focus Order Price Order Qty 10.00 Restore Defaults Cancel | |

The user can set different order related settings using this option. User can set the following:

• In preferences -> Order category, under order prompt, one can select the exchange segment check the Fresh option so while placing order system will prompt to the user before placing an order. From here, if user wants to set prompts, user can check the respective selection (Fresh, Modify, Cancel).

• Selection of PRO/CLI tag with as Default for Order Entry. If user wants to place an order for client so default value can be selected as CLI.

• User can select the default product type to appear in order entry screen and click on apply. When one calls the order entry dialog, the default product will be selected.

• User can select the default order type which needs to appear in order entry screen. When the order entry dialog is opened, the default order type will be selected.

• Order Quantity one can select the default order quantity selection type and apply. There are various options available:

i) Pick from market watch: When one set this option, the order entry dialog picks whatever the quantity available on the opposite side in the top best rate.

ii) Set No. of market lots: Here one can define how much quantity the order entry dialog should pick by default. For derivatives, it will be in number of lots.

iii) Pick the Derivative Market Lot: If one wants the order entry dialog to pick the derivative lot size for cash scrip order, user needs to check "Pick Derivative market lot for cash scrip".

• Quantity / Price / Value alerts can be set exchange-wise or across exchanges. The default order quantity can be set at every exchange segment level. At the user level, one can set the alerts for single order quantity, price and value limits. Whenever the single order field value exceeds these limits, it will give a prompt to submit the order or not. Quantity alerts should be in terms of lot size, price alert is based on the percentage of LTP.

• User can select Default client id, Prefix or retain Last Selected Client for order entry dialog.

• Enabling price range for order entry window based on the Upper and Lower circuit levels. When one checks "Enable Price range for order entry window" option, while placing the order, Nest trader will check for the circuit limits (Daily Price Range) for that particular scrip. In normal scenario, if one places the order outside circuit limits then the order will be freeze. So this option rules out the possibility of order freeze.

• Pick up order Instruction Line from market watch will allow the user to Tag the BWL order.

- Single click to place order from order entry dialog.
- Closing order entry dialog after placing order.
- User can set the Default disclose Quantity in Order Entry window.

• Check for order quantity during order modification. When user is modifying an open order, and simultaneously if partial quantity is executed, then the modification request that which will be send to exchange will be rejected. So if user selects "Check for order quantity during modification of order", in these cases, while modifying an order, user will receive a popup saying that "The order is updated. Continue Anyway?" If user say yes, the modify request will be sent to exchange otherwise the modification will be cancelled.

• This allows the user to keep Focus on Order Price / Order Quantity in order entry dialog.

• Order Alerts for Groups can be set Example: Z, TS, T group for BSE and BE for NSE cash

• Script Code Prefix can be set by user for BSE base on series example: 6 for 6 lacs series

VIII) RMS :

This option allows the user to set the color criteria for risk management point of view which help the user to view RMS window in an easy way. User can set the color criteria for the parameters given when any client will come in these criteria that client record will be displayed in that color selected in RMS View Limit window.

| ategory: | | |

• The user can set level like lower, moderate and high for the criteria i.e. % Margin Used available, on cash margin available, on mark to market loss %

• User can select sort ascending and sort descending option to display the color based on the parameter set in Low Value and High Value. This will get reflected in RMS View limit window.

Holding Enable Max Collateral – Not applicable to NSE

6.3 Tool Bar Settings

The Tool Bar provides keys to all the important functions in Nest Trader on a bar, so that the user can literally invoke such features at the click of a button. It is similar to Hot Keys, except that the Tool Bar functions can be invoked using the mouse. The Tool Bar can be docked anywhere in the workstation, or the user can also remove the Tool Bar from screen, by simply clicking on the Tool Bar option (un-ticking it) in the Preferences menu.

6.4 Message Bar

The Message Bar provides various tabs to provide all the log messages of user activity for that session. This includes Session messages that provides data for all actions performed by the user, Exchange messages, Internal messages that are received using the Messaging option (explained in Tools section), Order and Trades messages (also included in Session messages).

6.5 Status Bar

The Status Bar provides all messages that appear in the message bar. The significance of this is that the user can view the latest message updated in the message bar on the Status Bar.

7 Surveillance

7.1 RMS Limits

The RMS Limits can be viewed in a comprehensive manner in the RMS Update Limits window. The user can also create customized columns, by specifying a formula for the calculation based on which the user-defined column will be represented. RMS retrieves the orders and trades from the database when it comes up. Later it stores the same in its internal storage;

a. Update Limits (Ctrl+Shift+U) :

Add/Update Limits is used to set/update the limits for Branch, Dealer, Client group and Client. Once clicked following window will appear in which you have to select the entity for which user want to set or update the limit. Once you select that in list that client position will appear in the "present values" frame. If want to change/update or set new limit you have to double click on it. Moreover if any open position is there for that particular entity it willreflect in "Present Position" frame.

b. Rejected List

It will return user the list of all the orders rejected as they have violated the set RMS rules. And can be update the RMS by holding the Ctrl key and double click on selected row.

7.2 Category:

Here user can assign a category or modify or just view the category created for.

- a- Add Category (Shift+Alt+Y)
- b- Modify Category (Shift+Alt+M)
- c- View Category (Shift+Alt+V)

7.3 Holdings

This option allows to update holdings. Once selected a window will appear where user can select the account id to check holdings of clients. User has also an option to square off the Holdings. User has also has an option to give the collateral benefit to client after specifying the Hair Cut percentage on the stocks which client has in DP Account. This allows to the client to do purchase more stocks. It gives the details of the holding such as total quantity, Used quantity etc.

7.4 T1 Holdings

User has option to update the T1 Holding quantity for a client. T1 quantity means the quantity which client has not got that stock in DP but still it is in pool account of Broker or it can Buy Today and Sell Tomorrow quantity.

7.5 Scrip Margin:

The margin for particular scrip can be set using this option, user have to set broker as well client position limit. If the limit reaches up to the level it returns an alert prompt. Shift+M is assigned as short cut to invoke the dialog.

7.6 RMS Ban Symbols:

As NSE exchange stipulates Market wide limits for derivatives contracts; when these limits are breached, such symbols are banned for any entity for taking fresh positions in that symbol, wherein only squaring off of positions is allowed. There are two options available in RMS Ban Symbol i.e. FO Ban Symbol which is used to ban the contract and another is View Ban symbol which is used to view the contract which are ban by the admin.

7.7 Scrip Basket:

User can get the basket of scrips which follow the RMS rules, new baskets can be created or the old ones can be modified or deleted, or the basket can be assigned to particular category or you can get the category assigned for a particular basket through following options. a- Add Scrip Basket b- Modify Scrip Basket c- Delete Scrip Basket d- Assign Scrip Basket e- Get Scrip Basket.

7.8 Scrip Group:

This option is used to restrict the quantity wise, exposure wise, freeze quantity wise for scrip. A scrip group is created by admin and should be assign to category. Through this following entity can restricted to place the order define in a group i.e. Client, dealer, branch or broker.

7.9 Restricted Scrip Basket:

The basket can be created here which are restricted for trading for particular scrip or contracts mention the basket. The basked created needs to be assign to a particular category.

7.10 NRI Scrip Basket:

The NRI basket can be created through update or viewed by the option "view NRI Scrip Basket". This option is used to restrict the NRIs to trade on the scrip which are ban as per exchange list.

7.11 RMS Blocking

Here user can block Broker/branch/dealer/client group/client to place the fresh orders.

a- Block/unblock Orders: Here user can block Broker/branch/dealer/client group/client to place the fresh orders for a particular scrip or scrip group for a product and the block type (Intraday-sqroff/Non-sqr off/sqr off), even a category can be blocked/unblocked. Short cut Ctrl+F10.

b- Block/Unblock Spread Orders: This can be used to block/unblock spread/2L/3L orders.

7.12 Auto Square Off Exclusion List:

This option will allow excluding the clients from the auto square off for different market. a- Auto Square Off Exclusion List (For Cash) b- Auto Square Off Exclusion List (For Derivative) and c- Auto Square Off Exclusion List (For Commodity). The Admin user will invoke the window from the surveillance window and select the client to the exclusion list.

7.13 Execute Auto Square Off:

This option will allow you to execute auto square off for particular product. This option allows to square off the position which are taken on the basis of the intraday exposure given to client and which is not square off by clients. The admin need to invoke the auto square off window from the surveillance menu and click on Execute Auto Square -> Square of -> Auto Square off. Please find the below screens

Client Overview

Client Overview feature is used when client is mapped under multiple dealers. Dealers can view the order placed by other dealer for client. Dealers can also modify and cancelled the orders placed by another dealer for the client which are mapped under the dealer. While modification and cancellation the 15 digit code will send of the dealer who has modified or cancelled the order. The details will be stored in our Order History Logs in which it specifies who has modified or cancelled the order can be placed one dealer and modified by another dealer. This feature is the part of Nest Trade Application. This is needed to provide the contingency trading for clients when one dealer is not on desk and also for managing orders of client placed from Internet and mobile.

9 Tools

9.1 Option Calculator

This option allows the user to view the Option calculator for selected option scrip. With option calculator user will be able to get the Volatility percentage, Option Price i.e. values of Delta, Gamma, Theta, Vega, Rho. User has to give all related information viz. expiry date, option type, strike price, input values, volatility and interest rate etc. to get the Option Greeks values.

9.2 Position Analysis

This option allows the user to analyze the Greek values for the open and position taken in option scrips. User needs to select the parameter such as Exchange, Symbol, Expiry date, Instrument Name, Option Type, Strike price, Quantity and price to be filled. After selecting and adding the parameter user needs to click on Add position button after which user will be able to view the Values of Delta, Gamma, Theta, Vega, and Rho.

9.3 What If Analysis

The option allows user to check how much margin required buy/sell particular scrip for a particular client. User needs to select the Exchange-Segment, Instrument Name, Symbol, Client id, Client name Quantity, Price etc. which is required for a scrip/. This feature will help the users to know the margins will be charged before placing the order to exchange

9.4 Messaging

The messages can be sent to different users with the help of this option. The message can be sent to online users only. The sent message can be seen in log window and "Messages" tab as well.

9.5 Set Alert

User can set the alerts for the index as well as for security touching a specified level. Whenever the index or scrip meets the condition specified in the alert it gets triggered, and return a pop-up/E-mail or a SMS.

9.6 Alert List

It returns the alert list which are set but not yet triggered. The alerts can be modified or cancel here.

9.7 Set Order Alert

With this feature, the user can set an alert for a particular order wherein the user will be alerted about the status of that particular order. Alert can be set for the a status : a) Cancellation b) Complete c) Rejection d) Traded e) Trigger. Client can also set the mode of the alert to be communicated. For example, client can select TWS checkbox so that a popup message will appear on the screen. If Send Email option is selected, client has to specify email address so when the alert is triggered then email will be send to that specified email address.

9.8 Order Alert List

This option allows the user to view all Order Alerts which have not been triggered yet. The user can modify/cancel the alert here.

9.9 Offline Portfolio

This option allows the user to monitor the portfolio in which it will show the total investment amount and Current Amount and on that basis Percentage change and MtM will be shown. User needs to select Client id, Exchange Segment, Transaction Type, Symbol, Quantity and Price and then click on Add button. In Transaction History tab allows the user to view the Overall Gain for the portfolio stock wise. In status bar user will be able to see total qty of assets along with total investment and MtoM value.

9.10 Calculator

This options allows to open the calculator from Nest Trader

9.11 Dollar to Rupee Converter

This allows the user to convert dollar into Rupees with a given rate.

9.12 Lot Converter

This option allows the user to convert from weights to Lots

10 Window

Cascade

This option allows the user to cascade different windows which are opened in the Nest Trader Application.

Tile Window

This option allows the user to tile market watch windows which are opened in the Nest Trader Application.

Tile Window Vertically

This option allows the user to tile the windows vertically which is opened in Nest Trader Application.

Layout Manager

This option allows the user to customize the windows as per requirement. The windows which are saved will be opened next time which it was saved. User has an option to Save layout, Export Layout and Import Layout.

Save Layout: This option allows the user to Save market watch Layout. Export Layout: This option allows the user to Export Layout which was saved. Import Layout: This option allows the user to Import Layout for future purpose.

11. Help

The Help menu provides details such as the application details, market status, etc.

11.1 Connection Indication Bar

The Connection Indication Bar provides the status of the user's connectivity to the broadcast and the interactive channels. A green indication represents that the connectivity is proper, whereas a red indication shows that the user has lost connectivity to that channel.

The user also has an option to add an exchange, and view the status, whether the market is open or closed.

11.2 About Nest Trader

Under the Help menu, the About Nest Trader option provides information about the application such as application name, version number, released on, etc., to the user.

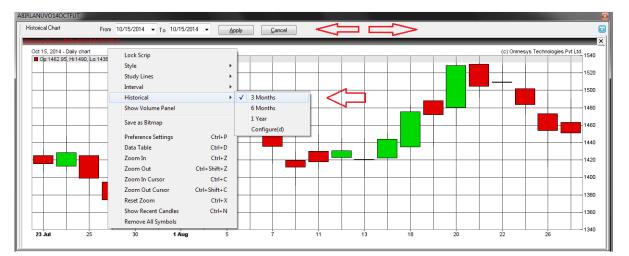

12. Nest plus – Charts:

Nest Plus "charting tools" provide intraday and historical charts with configurable intervals and built-in indicators, different study lines such as Ellipse, rectangle, trend line, speed lines, fibonacci retracements etc.

Intraday chart:

Historical charts:

12.1 Market Movers

Market Movers is a scanner tool that scans the most active securities in terms of Traded Volume, Traded Value, % Gainers and % Losers. The user can enter 'n' number of scrips to scan. By default, 25 scrips will be ranked. The user also has an option to set an asset price range filter to view only those stocks that are trading within the set range.

| | _ | | 5 Scrips | Asset Price Range | |

Nest Trader Version 3.16.0

12.5 Option Strategy

This option allows to users to view the trend of option contracts. Users have to do is just select bullish/bearish/neutral for selected option contract. It will calculate all Greeks and Portfolio data as well. User needs to select the particular underlying and then has to specify the strike price in the low and High Range and then user has to select the strategy i.e. Bullish, Bearish, Neutral, Volatile. After selecting the Strategy user needs to select View Pay off to see the Profit or loss for the strike price. In View Sensitivity user will be able to see the Graph by selecting the parameter in Enter Asset Price Range. User can select Date Range or Risk Free Interest Rate, or Volatility.

13.5 Fields that will be Present in category window

In category window user can view the margin which is charged for the order placed as per the parameter which are set in the category window.

14 Additional Features

14.1 New Order Term: Cancel on Log off (COL)

A new order term known as Cancel on Log off has been added as mandated by the exchange. A Cancel on Logoff order is a day order with an instruction to cancel the order when the user id is disconnected from Exchange trading system for any reason. This has been implemented in the adapter to the NSE Currency Derivative and Future and Option segment. There is no GUI change for the same. Cancel on Log off is optional for the clients and once applied will be applicable to all ids trading on the NSE Currency Derivative and Future and Option segment. All the order placed will be viewed in order book and traded order will be viewed in Trade book. If the Cancel on Log off flag is set for the user id at corporate terminal level then all the orders placed by the user will get cancelled once the user id gets disconnected/logged off from NSE and these orders will be reflected as cancelled in Nest after login to NSE.

14.2 Kill Switch

A new order term known as Kill Switch has been added as an additional feature by the exchange. This feature provides a facility to member to cancel all of their orders at the same time for a particular CTCL Id. Further, there is no GUI change and this is handled at adaptor level. This has been implemented in Currency Derivative and Future and Option segment.

14.3 Interest Rate Future

For IRF there is no change in the module. The trading features remain the same which is approved.

14.4 New index added as India VIX

For India VIX there is no change in the module. The trading features remain the same which is approved.

14.5 Account Harvesting Possible via Invalid Username

When user logs into Nest Trader and enters his login information and in case if the user has given wrong information about his logins, NT will throw error message which will be generic in nature and error message will not be specific displaying the details about the client, this will possible prevent misuse from the malicious users. Hence all the login information about the client login in NT in terms of error message will be generic

For example when user logs into NT and enters his user id wrong, NT would throw error message "Login Failure: Invalid Credentials" which is generic and not specific.

| NE | ST Trader-Login 🛛 | |
|------|---|---|
| | User Name GSDFHFDNH Go | |

14.6 Segment Wise Order Value Check

In NT Order Value check can be now configured segment wise. As per the exchange norms Max order Value for cash and FO is restricted to 10 crores, but no restrictions is laid in currency segment by the exchange. Hence in NT it is allowed to give value of more than 10 crores for CDS Segment.

Restrictions of 10 crores for Max order Value is retained for cash and FO Segment. Only Currency segment it is allowed.

User can give value of more than 10 crores in RMS window filed for currency **Max Order Value** field.

14.7 Option Suite:

This option allows the user to analyze the Greek values for the open and position taken in option scrip's. System automatically picks the users current position and based on the user position setting done the Greeks values are displayed on a real time basis. From this UI the user can take position or simulate a position by right clicking from the UI.

14.8 New Rules Added in RMS for Nest Trader Version 3.11.6

Scrip Group overall position limit for currency

We have added a new rule where in the broker can define a Scrip Group overall position limit for currency where in if the order qty (higher of buy/sell) exceeds the limits then the order will be rejected. If the order qty (higher of buy/sell) is within the Overall position limit, then the order will be sent to the exchange. This is applicable only for CDS

Price range rule needed for options

We have added a new rule where in the RMS will check the Price range of option before placing an order. The working/calculation of this rule is as follows. Firstly we will be calculating the Range. **Range** is calculated based on the LTP of the particular option token + Strike Price * Percentage change defined by the broker. Once the range is calculated we will be calculating the low range and the high range. To calculate the high range and low range the **RANGE** would be the reference point to derive the output for the same. The **low range** is calculated as by low range LTP of option – Range (calculated above) and **high range** is calculated based on LTP of the option + range (calculated above). Based on the above calculation if the price of option order is between the Low Range and High range the order will be placed, if there is any deviation from these then the order will be cancelled. This is applicable for Options

14.9 New Rules and features added in version 3.12.0

"Scrip Group Turn Over Order Level Limit:

We have added a new rule where in when we specify a Limit at underline level, then the user cannot exceed that limit for particular underline token (Fut &Opt). For example if we set a Limit of 500000 for NIFTY as Scrip group Turnover Order Level Limit then, the client can place in any of the NIFTY future ans option contract upto the amount of 500000.

MNM_RMS_AVAILABLE_MARGIN and MNM_RMS_REQUIRED_MARGIN is sent in rejection reason.

Whenever an order is rejected, the user can view the rejection reason as well as the required margin separately

Brokerage is charged for custom products

For custom product the member can charge brokerage during the placement of the order.

"Consider Brokerage per lot only for option buy" rule handles CUR segment also.

We had a rule or consider brokerage per lot only for option buy, currently this rule was applicable for NFO, this rule has been extended to CDS also, in this rule, brokerage will be calculated per lot only for option buy contract while placing the order

Consider only cash for Illiquid scrips

We have added a new rule where if the client has bought a stock in a inliquid contract, then if the client has pure cash available only then the order is accepted, if there is any leverage/adhoc given to a client then the client cannot buy the stock. The internal risk mgmt system will reject the order

Exposure margin based on stock and index factor

We had added a new rule where in the member can set a leverage factor based on index/stocks. If the client give index factor, then it implies to all the index scrip trading, and if the member sets the leverage factor based on stocks, then it implies to all the stock, the client can take leverage in all stocks to the leverage factor set.

Dont Allow Notional Cash for option buy

We had added a new rule where in for option buy, the risk module will not consider any amount available in Notional cash for option buy order.

Block Deal logic for BL scrips in NSE are handled .

We have changed the logic while trading in BL series; we consider the LTP and circuit prices of EQ series while validating the order.

Option Strike price based on LTP percentage for MIS

This rule is applicable for MIS product, based on underlying LTP and the broker defined percentage, the risk management module will calculate the range of the strikes which the client can trade for.

Restrict position conversion between custom products

We had added a new rule where in client cannot convert the position from one custom product to another product.

Restrict position conversion for CF option

We have added a rule where in the client cannot convert his carry forward option position to any other product.

Square Order Margin"

"Consider brokerage based on flat rate and percentage.

We have added a new rule where in the member can set the brokerage to a falt value or percentage value baed on the value brokerage will be charged accordingly.

Basket Level validation for custom bsket order.

We have added a new rule where in, if the client places a basket order, the risk module will check whether all the scrip's under the basket have required margin opr not, if the margin is available all the order will go through, if the margin isn't available for any single scrip also, then the entire basket order will be rejected.

Index % Close value displayed Post market close.

Once the market is closed, the user will be able to see the net change and % net change for the given day.

No of days of warning message during login for exchange expiry:

The user can set an alert where in before the" x" no of days if any of the exchange is going to expire the system will earning message during login sequence.

Order history:

In the order history window the client will be able to see all the relevant details of the order as well as the account details.

Optimization done during add user details.

When a user is added, all the details of the user are sent in a single instead of multiple request. This is internal module change done for optimization.

Pre validation of AMO orders

All the AMO orders that are placed after the limit files is uploaded in the system, then all orders placed post the upload will be sent to internal risk module for validation and post

successful validation the orders will be parked with the adaptor, and as soon as the market get started all orders will be sent to exchange.

Spread order rejected by the internal application

If a spread order is rejected for any reason before going to the exchange, then the internal system will send the required details of the order. This change is internal to the system and has no impact from the end user perspective.

Customized basket order entry window:

Once the user places a customize basket order, the Place button has been dislayed so that the user doesn't place the order multiple times.

Optimization in get orders/trade post market close:

Post the market close, the system reconcile with the exchange for all the orders and trade, in this module we have done optimization which is internal to our system.

Modification/cancellation of orders

During modification and cancellation if at all there is any internal rejection by the application, then in the rejection we sent across all the relevant information internal to the system.

Reconciliation:

When the user does reconciliation, at given point in time, then the internal system displays the relevant information to the user.

Optimization while sending the USER TAG

We have done an optimization while sending the user Tag, during the order placement time.

Retrieve normal basket details after invoking different windows

When the user creates a normal basket and before placing the order, if the user invokes any other window such as order book/trade book/net position, then after coming back to the normal basket, the application will retrieve the basket and its details created by the user initially.

14.10 New Rules and features added in version 3.12.1

Enhancement in Call and trade Module

We have enhanced the working of the call and trade module, where in if the dealer searches/activates a client, then the same client will be retained in the system, if the dealer searches another client then both the earlier searched as well as new client added will be retained in the system.

New RMS rule added: Allow Direct collateral on option buy:

We have introduced a new rule know as Allow Direct collateral on option buy. The working of this rule is applicable to Option segment where in for an option buy only amount will be direct collateral that is provided will be charged.

CNC margin and Brokerage is deducted from Cash in rule "Check Cash vs Collateral ratio".

We have a rule known as Check Cash vs collateral ratio in which for CNC margin and brokerage will be debited from the cash balance.

Gross collateral for custom product:

This rule will help to compute the collateral given for the custom product This rule will help to get the gross collateral for holdings uploaded in custom product and also to compute the custom product gross collateral for warning.

Position limit including CNC:

Currently the position Limit rule was applicable for MIS and NRML product, now we have enhanced this rule even for the CNC product.

Introduction of the exchange rejection

We have a mechanism where in if there is any new rejection introduced by the exchange, then those rejection can be written in the file, and whenever there is any rejection, based on the error code provided by the exchange the system will display the reason for the rejection.

Optimization of the reconciliation process:

We have optimized the internal processing of reconciling the order. This is internal to our system.

Optimization of the Focus of NT when multiple applications are running

When multiple applications are running on the client's machine, we had observed that the focus was shifting to other apps in few scenarios. We have optimised this and when the NT is running and even if multiple applications are running the focus of NT will remain until the user click on the other application.

Cover order main order modification

While modification the main leg price of cover order price, if the user inputs the modification price same as trigger price, then the modification request will be cancelled and the order will be open at the initial price that was available before the modification of the order.

Cover order leg order modification

Once the user has modified the main order price, the user can modify the price of the second leg below one tick of the first leg modification

Optimization in AMO order processing.

We have optimized the AMO order processing where in the order stored in the file when regenerated back the next day, the process has doing the same in optimized.

Enhanced performance in the internal processing of orders:

The order processing which is internal to our system has been enhanced for better performance.

Constituent basket order entry:

Optimization wrt orders placed when order based on qty is set has been handled.

Introduction of the exchange rejection

We have a mechanism where in if there is any new rejection introduced by the exchange, then those rejection can be written in the file, and whenever there is any rejection, based on the error code provided by the exchange the system will display the reason for the rejection.

Optimisation in Beep Alerts window:

In the beep alert option available in the preference setting, we have done optimization internal to our system where in the system performance has been bettered. The user can use this functionality without impact the system performance.

14.11 New Rules and features added in version 3.13.0

Cross Currency Feature Supported.

We have added the feature of Cross currency, wherein two foreign currencies can be traded. The contracts that are applicable are:

- EURUSD
- GBPUSD
- USDJPY

Order placement functionality and the order viewing for the same is handled in this module. Along with that Square off related changes for cross currencies are handled.

NRI Trading Module:

Dedicated NRI trading account can be created for NRI to trades.An NRI client have multiple trading accounts for PIS NRE, NON PIS NRE, PIS NRO & NON PIS NRO under repatriable and nonrepatriable category for buying and selling shares, IPO, mutual funds, Rights/Bonus Issues , F&O which should be assigned to single UCC client for placing orders.

Supports Exchange Transcode:

We have handled the exchange concept of transcode where in while modifying we will only send Price and Quantity for modification apart from no other parameters will be used.

Pre Validation of AMO:

We have added a feature in AMO where we can allow the broker to define whether he wants to place orders in pre Open or Post market opens.

Change "Check price range for options based on LTP range

We have done the changes in the above rule wherein only active order is validated. That means for buy order the validation is upper limit and for sell the validation is lower limit only

14.12 Changes made in 3.14.0 version.

New Rule added -> Option Strike price based on LTP percentage for Sell Orders

We have introduced a new rule know as Option Strike price based on LTP percentage for Sell Orders. As per this rule broker can define a percentage for options. Based on the underlying LTP and the pre defined percentage, strikes will be open for trading in options. This rule will apply only for option sell.

New Rule added -> Scrip Group Restrict Order with Zero Price

We have introduced a new rule know as Scrip Group Restrict Order with Zero Price. As per this rule, Limit order with 0 price will be rejected by RMS with a scrip group rule. This will help the broker for which instrument/scrip he requires this rule to be implemented.

New Rule added -> Restrict CASH NRML Short sell position in position conversion

We have introduced a new rule know as Restrict CASH NRML Short sell position in position conversion. As per this rule, Only CASH NRML short sell positions will be rejected, if any position leads to Short (naked Position) while doing a position conversion from NRML to any other product. This is applicable only for CASH Segment.

New Rule added -> Check Trigger price vs LTP for SL-M orders.

We have introduced a new rule know as Check Trigger price vs LTP for SL-M orders. As per this rule, Trigger price cannot be less than LTP for buy orders and cannot be more than LTP for sell orders.

New Logic -> Segment wise order values are checked in the following rules

"Option Order Value with strike price"

"Option Order Value with strike price including square off order"

"Option Order Value excluding strike price for buy"

For the above rules only Max order value used to get considered, however we have extended this feature to segment wise check if applied to the category.

New Logic -> Square off orders that are generated can be generated as a LIMIT

We have a configuration that, MIS square off orders will be placed limit with the protection which is published scrip wise. During auto square off and admin square, option provided to place limit orders based on the scrip wise market protection percentage set for scrip's.

New Logic -> RMS Bypasses below rules (mandatory rules) during preopen session for the listed/new listing.

"Check price based on LTP for Buy and Sell Excluding SL and SL-M Order" "Check price based on LTP for Buy and Sell Orders"

During pre open time we by pass validation of the above rules.

14.13 Changes made in 3.14.4 version

> Display Total Traded Value in thousand.

We have added a feature where in the Total trade value will be seen in thousand in the market watch screen against

Market Protection Field in Different Window

We have added fields know as Market protection in Net Position as well as Admin Position. The user can place a square off order with the protection field.

Script wise Market protection -> Market protection

A new feature where in the broker can define the script wise market protection. So whenever the user invokes that particular scrip from F1/F2 the protection defines for that particular scrip will be by default loaded. For example the broker can decide a market protection for reliance as 2% and Wipro 3%, as soon as the user invokes Wipro the market protection field in the F1/F2 will be pre loaded with 3% and in case of reliance it will be preloaded with 2%. The user can check the market protection as per his will and wish

Multiple Modification of Stop loss Order

The user can do a bulk modification of Stop loss Order, for the stop loss order placed. The user will be able to change the trigger price for the stop loss order.

MTM calculation in holding window.

The system will be able to calculate the MTM for the holding that are uploaded via the a back office system. While uploading holding if the broker uploads the close price, then

through a feature of custom column the user can calculate the MTM for the particular stock.

> Orders to be released in Normal Market

If the user has placed an order via the AMO and the orders that are released in the Pre open session, then order such as SL-M and SL-L type along with IOC validity and Disclosed quantity such orders will not be released in the pre open exchange, the system will release those in Normal market open session.

> Doman wise restriction of No of order per second

We have added a feature where in the broker can decide the maximum no of orders per second the user can place, if the broker defines a limit and if the user places beyond the limit the system will cancel such orders. This feature will work only if the broker configures the same.

Option factors are added in category for rule "Consider flat brokerage only for options"

We have an option to set the brokerage at the backend for option orders. When this rule is added, the required percentage can be set by the broker. Considering the base price set at the backend, the risk management will calculate the brokerage to be charged for option.

Additional Margin is blocked for GSM scrips

For any GSM scrip's, based on an indicator, more than 100% margin will be blocked for "Var and Elm margin for CNC" and "Scrip Basket Margin order level including CNC product" rule. Adding these rules, the broker has to set the margin to be blocked.

Primary/Secondary Concept for Cover Orders

When the primary server fails and DR is triggered all the order of CO will are also moved to the secondary server, during the movement if any of the trade message are available, the system will consider those trades also.

Optimization during Reconciliation process

We have optimized the internal process of reconciliation where in during the reconciliation stage if there are fills coming in we store the same and display once the reconcile is completed

Prevalidation of AMO orders for IPO listed scrip's

Pre validation of AMO orders are done for IPO listed scrip's, placed during normal market hours for which the IPO scrip is treated as Pre open

Optimization done for Trade modification

When trade modification is rejected by the exchange, we have optimized the process where in we send the fill id and order no during the modification stage, which inturns after the confirmation is received are populated in our system.

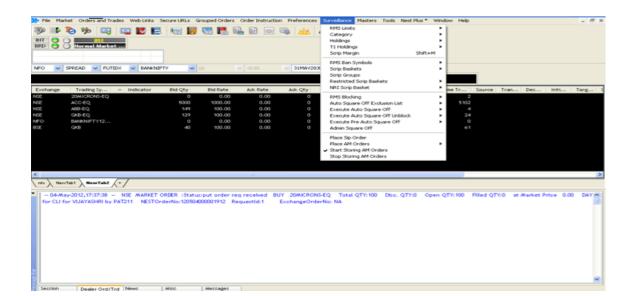

Primary/Secondary Concept for Cover Orders

When the primary server fails and DR is triggered all the order of CO will are also moved to the secondary server, during the movement if any of the trade message are available, the system will consider those trades also.

Equity SIP

A synthetic order type where in the user can create his own SIP investment on the equity segment. The user can decide the frequency and the duration of the SIP orders to be placed. Also, the user can define the SIP to be placed based on the quantity or the Amount to be placed for each SIP order. The user can also decide the transaction type for the SIP i.e. BUY OR SELL(user need to have holdings only then he will able to do a SELL transaction.

Once the user places a SIP, the system will maintain the calendar of the SIP to be generated based on the inputs given by the user. Based on the calendar, the orders will be generated by the ACTION of the ADMIN. The ADMIN will need to go Surveillance Menu -> Place SIP Order.

Once the ADMIN clicks on the same, the admin will displayed all the SIP order that needs to be paced for that day.

The ADMIN will be able to see all the orders along with the order details, once the ADMIN clicks on Place Order(s), the orders will be placed after going through the risk management and then the orders will go to the exchange.

14.14 Changes made in 3.15.0 version

SCRIP BASKET AND RESTRICTED SCRIP

We have a feature of Restricted scrip basket and Scrip basket where in the Admin can create a both the scrip basket (ADMIN can create and assign it to category it is applicable to the entities to which that category is assigned the rules and features applied in scrip group is applicable to the entities to which that category assigned) and restricted basket(the basket can be created here which are restricted for trading for particular scrip

or contracts mention the basket.) based on the same the user will be access those scrip specified. This feature is enhanced to CDS exchange segment.

GTC/GTD order placement:

GTD stands for **Good till Day**. GTD is a type of order that enables the client to place a buy and sell order in scrip's of his preference specifying the period for which he want the order instruction to be valid. The period should be within the maximum validity date i.e 10 days (this is configurable by default this is 10 if the brokers wants to configure he can do so accordingly).

GTD orders works on the basis of the instruction given by the client to place buy and sell order for given scrip till the period of time selected for GTD orders, provided that execution of the entire quantity has not taken place. This signifies that if the order is not executed for the entire quantity, the system shall place fresh orders for the unexecuted quantity in your account on the subsequent trading days till the entre quantity is executed before the validity date. For GTD only limits orders will be allowed and will contain CNC as the product type. Not other condition will hold good for the same.

For example, the clients place an order on 30-10-2017, as GTD Order to buy 100 shares of Reliance at a Limit price of Rs.950 with order validity date as 08-11-2017. The order will be open in the client's order book with all the relevant details, if the clients get trade of 50 quantities on 30-10-2017, then on 31-10-2017, the system will generate a new order of 50 quantities of RS 950 with a new order number for the same trigger id when the exchange message is received of the markets open. If the client doesn't get trade on 08-11-2017, then the system will not place an order on 9thth as the validity date is lesser than today's date.

GTC stands for **Good till Cancel**. GTC is a type of order that enables the client to place a buy and sell order in scrip's of his preference specifying the order to be placed till its get cancelled by the user.(maximum of 10 days this is configurable by default this is 10 if the brokers wants to configure he can do so accordingly).

GTC orders works on the basis of the instruction given by the client to place buy and sell order for given scrip till the user cancels the order. This signifies that if the order is not executed for the entire quantity, the system shall place fresh orders for the unexecuted quantity in your account on the subsequent trading days till the entre quantity is executed before the user cancels the same. Similar to GTD, the user can place GTC orders as Limit orders and with CNC product type.

Client Name to be displayed on title bar

We have added a feature where in if the client name is more than 20 character currently the user should scroll over the client name to view the entire client name in the F1 and F2 order entry screen, now we have done the changes where in if the client name is more than 15 digit we will display the client name on the title bar of the Order entry screen.

Scrip group utilization

We have added a feature where in the Admin can view scrip group utilization done for a particular client based on the scrip group assigned to the client's category

14.15 Changes made in version 3.15.1

Block Deal order Entry:

As per the recent SEBI/exchange circular the Block Deal order that can be placed by the user is minimum of 10 CRORE. We have handled this check in our system where in the user cannot places an order less 10 CRORE and 5 lakh quantity in our system, if he tries to place below the mentioned amount/quantity our system will reject the orders.

No of AMO orders placement can be configured

The Member can configure the no of orders that can be placed by the user. Say for example if the Member sets AMO order count to 10, then the user will not be able to place the order beyond the limit set. The count is not applicable for CNC sell orders (as these orders are holding sell orders). The configuration is provided via the backend. This will be applicable to across all the clients across the Member and across all the exchange he is enabled. This is applicable for CM, FO and CDS segment.

Block user at Broker level.

We have Added a feature where in if the Member has multiple zones/regions and requires to block the trading for a entire zone/region then he can do the same across at

one go for all the clients under a zone/region. This is a configuration provided and the member can use the same whenever required.

Modification/Cancellation of order during Pre open session(matching session)

We have added a feature where in the clients can modify/ cancel the order post the pre open session is closed and before the Normal market is open. So if the user tries to modify/cancel, the order, our system will treat this as an AMO request and store this request in the internal system, and once the exchange open message is received we will release this modification/cancellation request to the exchange.

RMS Rules count

currently in the RMS category window we can add upto 52 rules, however in the latest version the member can add upto 70 rules for a category.

MTF product -> Rules validation

In the current feature of MTF product, we will validate the following rules in our Risk management module

- Consider Unrealized Loss only for MTF buy
- Consider Realised profit and loss for MTF
- Consider Unrealized Loss only for MTF"
- Consider Productwise Adhoc for position conversion"
- Consider Collateral including T1 holdings for Custom Product"

New RMS Rule added -> ->Check ban Symbol by underlying

We have added a new rule where in if the member assigns this rule for a category then the client belonging to that category will not be allowed to convert his position to any other product type. This is internal to the system.

14.16 Changes made in version 3.16.0

New Fields in Market watch

We have two new fields in the market watch screen, the new fields are 52 week and 52 week low.

ISIN and Contract name in the snap quote window

We have added a new feature where in the snapqoute window, the user will be able to see the contract name and ISIN code of the particular scrip's selected. This will be displayed on the header of this window

Net change in snapqoute window

We have added a feature where we will display the net change values for the scrip's in the snap quote window.

Holding Square off changes

We have added a new feature in the holding window. where in the user will be able to do a square of his holdings based on the following criteria:

- Amount
- Quantity %
- Quantity

| R | View Ho | | x | | | | | | | |
|---|------------|---|-----------|---------|------------|---------------|-------------|----------------|----------------|----|
| C | lient Id | | Clie | nt Name | • | Produc CNC | t Type | Get Holdings | | |
| 9 | Square Off | | 🔘 Qty (%) | 🔘 Qty | Amount | | | Square Off | Collateral Lis | st |
| E | xchan | * | Symbol | Series | Scrip Code | Client ID | Product Cod | e Collateral T | Qty | Us |
| | | | | | | | | | | |
| Ľ | | | 111 | | | | | | | + |
| N | ISE : | | BSE : | | MCXSXCM : | MN | SX : | NDM : | YSX : | |

Amount wise

If the user selects the Amount and gives the X amount then the system will calculate based on the amount to the nearest quantities and place an opposite sell order. For example, if user have 1000 QTY of reliance holdings and if LTP of the scrip is 1005 and if user give

square off value amount as 2200, then system will calculate and place sell order i.e 2 QTY in this case.

Quantity %

If the user selects Quantity as % and gives an X percentage, then the system will calculate based on holding quantity and place an opposite order (sell order) for the calculated quantity. Say for example the user mention QTY% as 20 and if the user has 100 holdings qty, then the system will calculate 20% of 100 quantity i.e. 20 quantity and will place a sell order of 20 quantity in this case.

Quantity

If the user selects Quantity and gives X quantity, then the system will place an opposite order (sell order) for the mentioned quantity.

• Net Position -> Write to Excel Bric Bar Values

Whenever user does a write click to excel from net position, the bric bar values (Buy value Sell value, Buy Qty, Sell Qty etc) will be written in excel also

• Holding Screen -> View snapqoute Window

The user can invoke the Buy order/Sell order/Snapquote window from Holding screen

• RMS Fields to restrict the values which exceeds 15 digit

We have added an additional check where in if user/Admin tries to enters more than 15 digits in Set limits/Add/Modify Category window, then user will not be allowed to add more than15 digit value in the RMS screen.

• User buy's in CNC than it should reflect in View Holdings.

We have added a feature where in the today's Buy Quantity in CNC product will be displayed in.

• Adding cash market related symbols on a single click

We have added a feature, wherein from Market Watch Group Settings (Ctrl+G) dialog the user will be able to add All cash securities for selected series.

| Group Settings [pr | rashwin] - PRASHWIN |
|--------------------|---|
| Group Name | Options |
| | Add New All cash securities for selected Series/Group |
| Security | Air ratures securities for selected Expiry |
| Exchg-Seg Type | All securities for selected market type |
| | Add |
| Group Name | Exchange Series Instrument Symbol Option T Strike Price Expiry Date |
| prashwin | |
| PS1 | |
| NSE BSE | |
| NSE1 | |
| | |
| | |
| | |
| | |
| | |

• Group Basket order entry

We have added a feature where in dealer/user can create client group for placing bulk order for particular set of client. The user will be able to create the group from a new window known as Local Client Group manger, where he can create a group and assign "n" no of clients. The user can create multiple groups also.

| Local Client Group Mana | iger - PRASHWIN | Same and an | |
|-------------------------|-------------------|-------------|---------------------|
| | Add Group | | |
| Group Name | Client ID | Client Nam | |
| ABC | ✓ CLIENTTR | | Add <u>Client</u> |
| Group Name | Group Name ABC | Client Id | Client Name BOSS |
| nse ABC | ABC | CHARANINCL5 | CHARANINCL5 |
| | ABC | CLIENTTR | CLIENTR |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| Import Group Expo | ort Group | | Total Clients 3 |

Once the group is created the dealer can place the order for that group from Basket order Entry window ->where in instead of CLI/PRO, he will have a third option knows as

Group. If he selects the same, the group name will be populated in the client ID field and if he clicks on add, in the bottom window the user will be able to see the group client's order details in tis window and post viewing the same the dealer/user can place an order for these clients.

• Admin Message to be restored for second session

We have added a feature where in if the admin has sent message and then once the user logs out and relogins all those message will be made available to the user again.

• Display of indicator for buy Back of Shares

We have provided a feature where in the scrip has buy back then in the snap quote for that particular script, a * mark will be displayed against the price that is of Buy back. The same will be made available in the estimated price of matching field in the snapqoute window

• Order Preference transaction Type

We have added a new feature where in for order entry the user can set the preference setting transaction wise i.e. for Sell certain preference can be given and for Buy certain preference can be give. For example a user can say that for all sell orders market order to be placed and for Buy order all orders should be Limit Orders

• Simplified Search scrip option

We have added a feature where in the user will be able to search any scrips across exchanges easily. For example if the user searches Reliance, then all contracts for reliance i.e in cash, fo and options will be displayed to the user.

• Option Strike price based on LTP percentage for Buy Orders''

We have added a new rule to allow trading in only a few Strike Prices (based on the LTP broker can define the %, only those strikes the orders will be allowed to places for option). This rule is applicable for Buy orders only.

Let's suppose, Percentage published for all scrips is 5% LTP for a given Underlying is 10,00. Any entity to whom a category with this rule is assigned will be able to trade only in Strike Prices from 950 to 1050.

• ClientWise position limit for Instutional Investors

We have added a rule which is similar to clientwise position limit. As per this rule, the user has to create separate category for the rule which will facilitate user to specify

whether to use CWPL limit or TMOPL for particular client. Please note 'Default' category will continue to have 'CWPL' check as default check.

• Cover Order -> Naked position Square off

We have added a feature where in if the client has a naked position in cover order i.e Buy order is completed and stop loss order is rejected/cancelled/exchange cancelled, then for such orders the user/Admin can exit his position by clicking on EXIT button from order book/or through CO auto square off(by Admin). At the time a opposite cover order will be placed to the exchange.

• PAN no to be send with the Order.

As per the exchange API, we are now sending the PAN no of the client for whom the orders are placed. The same is visible in the Order Book.

• GTC- GTD Orders -> Minimum Order value check

We have added a feature where in for GTC/GTD orders, the broker can define the minimum order value to be placed for GTC/GTD orders, if the user enters the values less than defined, then the order will be rejected by the system.

• Minimum Order Value for Equity SIP Orders

We have added a feature where in for equity SIP orders, the broker can define the minimum order value to be placed for equity sip orders, if the user enters the values less than defined, then the order will be rejected by the system.

• Basket Order Placement for Equity SIP

We have added new features where the user can place a Bulk basket of Equity SIP order at one go.

• Equity SIP -> Other Products

We have added a feature where in the user can place a SIP order for MTF product.

• AMO Orders -> Pre Open -> Pre validation -> Store

We have added a feature where in when AMO orders are placed for scrip's which are not available for trading in Pre Open, those scrip's are not send for internal validation in pre open and are not released in pre open, they are internally stored and once the pre open is completed and before the normal markets opens these orders are sent for internal risk validation and then are stored with adaptor and on open of the exchange such orders are sent to exchange.

• Auto rectification of Lots

We have added a feature where in the user has not given the quantity in board lot quantity then the system will automatically pop up the user with adjusted quantities (nearest boar load qty) and on confirmation the system will place an order to the adjusted quantity.
